World Health
Organization

World Health Organization, WHO Press Information Products Catalogue – Spring 2011

The Spring 2011 catalogue provides bibliographic data and descriptive texts on over 100 recent information products that have been published since October 2010 by the World Health Organization, its regional offices, and the Joint United Nations Programme on HIV/AIDS (UNAIDS). The catalogue is divided into three sections, corresponding to English, French and Spanish language editions. Additional sections include: a selection of WHO publications that are available for translation rights (see pages 38-41), a selection of WHO books translated into Arabic by the WHO Regional Office for the Eastern Mediterranean (see pages 42-43), and a selection of books translated into Chinese (see pages 44-45) and Russian (see pages 46-47).

This new collection of WHO information products reflects the work and priorities of the Organization and provides guidelines and standards for medical, technical and scientific professionals working in many different fields.

How to order

An alphabetical index of titles is provided at the end of the catalogue along with the contact addresses of WHO (pages 65-67). An order form is contained in this catalogue on page 69. You can also order online at the following address : <http://www.who.int/bookorders>

WHO information products can be ordered from sales agents (see list at the end of the catalogue) or directly from WHO. Orders addressed to WHO must be accompanied by payment in Swiss francs (CHF), EURO or US dollars. Payment by credit card is accepted (see order form page 69). Handling and shipping charges are extra (see order form page 69).

Getting to Zero

2011-2015 Strategy Joint United Nations Programme on HIV/AIDS (UNAIDS)

This document outlines the UNAIDS 2011-2015 strategy. It was approved by the UNAIDS Board in December 2010. It outlines three strategic directions to reach the UNAIDS vision of Zero new HIV infections, Zero Discrimination and Zero AIDS-related deaths: revolutionize HIV prevention; advance human rights and gender equality for the HIV response and catalyse the next phase of treatment, care and support.

Joint United Nations Programme on HIV/AIDS

AIDS Scorecards: Overview

UNAIDS Report on the Global AIDS Epidemic 2010

This report provides a quick snapshot of the state of the AIDS response, key findings and action points. For the first time UNAIDS is presenting AIDS scorecards that provide a quick overview of the progress made by United Nations Member States in the global AIDS response.

The report also includes highlights of the global epidemiological trends. Together, they provide a synopsis of achievements, failures and obstacles in achieving universal access to HIV prevention, treatment, care and support.

HIV Surveillance in the Middle East and North Africa

A Handbook for Surveillance Planners and Implementers

This handbook for surveillance officers and programme managers is designed to assist them in the planning and implementation of key components of a surveillance system for HIV infection and AIDS in a region where low-level and concentrated HIV epidemics currently predominate. It focuses primarily on the components of surveillance systems that track HIV prevalence and related risk behaviour among most-at-risk populations over time.

Global Report: UNAIDS Report on the Global AIDS Epidemic 2010

The 2010 edition of the UNAIDS Report on the global AIDS epidemic includes new country by country scorecards on key issues facing the AIDS response. Based on the latest data from 182 countries, this global reference book provides comprehensive analysis on the AIDS epidemic and response. For the first time the report includes trend data on incidence from more than 60 countries.

The new UNAIDS report shows AIDS epidemic has been halted and world beginning to reverse the spread of HIV. New HIV infections have fallen by nearly 20% in the last 10 years, AIDS-related deaths are down by nearly 20% in the last five years, and the total number of people living with HIV is stabilizing.

Monitoring Equity in Access to AIDS Treatment Programmes

A Review of Concepts, Models, Methods and Indicators

This toolkit, developed by WHO and EQUINET, provides a practical resource for programme managers, health planning departments, evaluation experts and civil society organizations working on health systems and HIV programmes at sub-national, national and regional levels in east and southern Africa.

AIDS treatment programmes can also upgrade the general health of the population if they are introduced in the right way. The concepts, models, methods and indicators included in this toolkit outline the ways to make this happen. Case studies from the region and elsewhere give the first-hand experiences of countries using these approaches in their AIDS treatment programmes and show how effectively the theories are translated into practice.

HIV/AIDS among Men who have Sex with Men and Transgender Populations in South-East Asia The Current Situation and National Responses

Same-sex behaviour is identified in all societies. However, in the South-East Asia Region, the majority of men who have sex with men and transgender persons are highly stigmatized and discriminated against. There are an estimated 4-5 million men who have sex with men; among the transgender population, the number is less clear. Many of them are involved in high risk sexual behaviours that put them at risk for HIV infection, resulting in a high and increasing HIV prevalence in several countries of the Region. Control of HIV infections among these populations is thus an urgent public health priority.

The countries included in this review are Bangladesh, India, Indonesia, Maldives, Myanmar, Nepal, Sri Lanka, Thailand and Timor-Leste. Though most of them have some form of interventions for men who have sex with men and transgender populations, the majority of these populations do not have access to various HIV services due to widespread stigma and discrimination, and punitive laws in most countries.

This report provides information on the status of the epidemic among these populations in the South-East Asia Region. It highlights the need for improved advocacy efforts and a greater national response to save the lives of these populations who are at risk for HIV infection.

Priority HIV and Sexual Health Interventions in the Health Sector for Men who have Sex with Men and Transgender People in the Asia-Pacific Region

This book describes the priority health sector interventions recommended to achieve universal access for the prevention, treatment, care and support of HIV and sexually transmitted infections among MSM in the broader perspective of male sexual health.

It summarizes key policy and technical recommendations developed by WHO related to each priority health sector intervention. It guides the selection and prioritization of interventions for HIV prevention, treatment, care and support. Finally, it directs readers to key resources of WHO and other organizations containing the best available information on the health sector response to HIV among MSM.

Order no. 15200134

Management of National Blood Programmes

This publication collates the topics covered during the three workshops organized jointly by the Blood Services Group (BSG) of the Health Sciences Authority (HSA) in Singapore and the World Health Organization Regional Office for the Western Pacific (WPRO), Manila and Regional Office for South-East Asia (SEARO), New Delhi, supported by the Singapore Government through its Singapore Cooperation Programme. It will serve as a useful reference for public officers and professionals involved in the management of national blood services.

Each workshop focused on key management areas that were deemed to be critical components of well-managed blood programmes. Presentations on various aspects of these management areas, interspersed with practical sessions and group discussions, combined to provide participants an overview of key learning points. Round-table discussions and sharing of different practices gave a good understanding of management practices in the region and illustrated the many ways in which different issues and challenges could be managed.

Recommendations for Estimating the Need for Blood and Blood Components

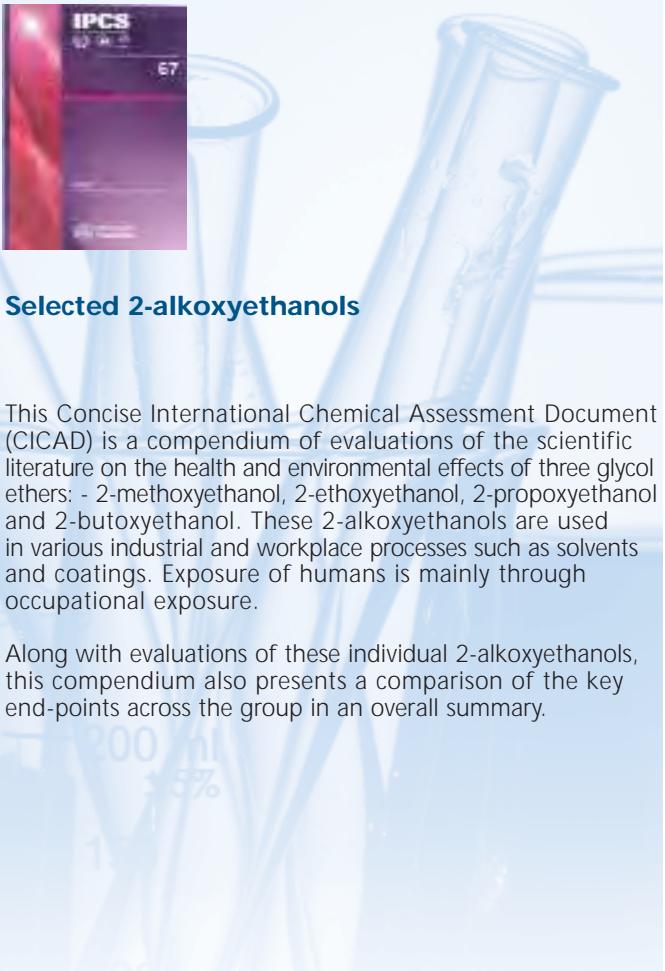

This book seeks to support the planning of activities by blood programmes and services in the Region of the Americas that supply blood to hospitals. Its contents are based on the premise that, to perform their functions more efficiently and effectively, supply centers must project the future need for blood components at the hospital level and, thus program more precisely the achievement of their goals.

Selected 2-alkoxyethanols

This Concise International Chemical Assessment Document (CICAD) is a compendium of evaluations of the scientific literature on the health and environmental effects of three glycol ethers: - 2-methoxyethanol, 2-ethoxyethanol, 2-propoxyethanol and 2-butoxyethanol. These 2-alkoxyethanols are used in various industrial and workplace processes such as solvents and coatings. Exposure of humans is mainly through occupational exposure.

Along with evaluations of these individual 2-alkoxyethanols, this compendium also presents a comparison of the key end-points across the group in an overall summary.

WHO Human Health Risk Assessment Tools: Chemical Hazards

The purpose of this toolkit is to provide its users with guidance to identify, acquire and use the information needed to assess chemical hazards, exposures and the corresponding health risks in their given health risk assessment contexts at local and/or national levels. The Toolkit provides road maps for conducting a human health risk assessment, identifies information that must be gathered to complete an assessment and provides electronic links to international resources from which the user can obtain information and methods essential for conducting the human health risk assessment.

By doing so, the Toolkit also aims at raising awareness and promoting the use of globally accepted risk assessment information that has been developed by international organizations such as WHO, the Food and Agriculture Organization of the United Nations, the United Nations Environment Programme, the Codex Alimentarius Commission and OECD for use in countries.

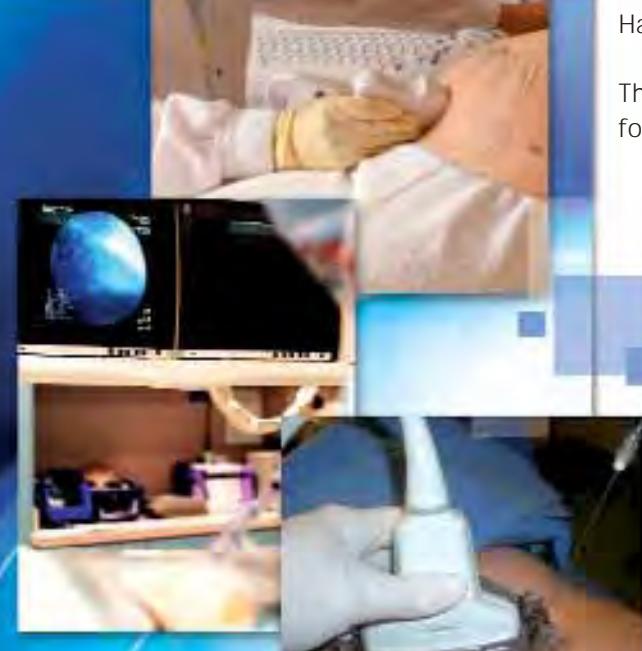

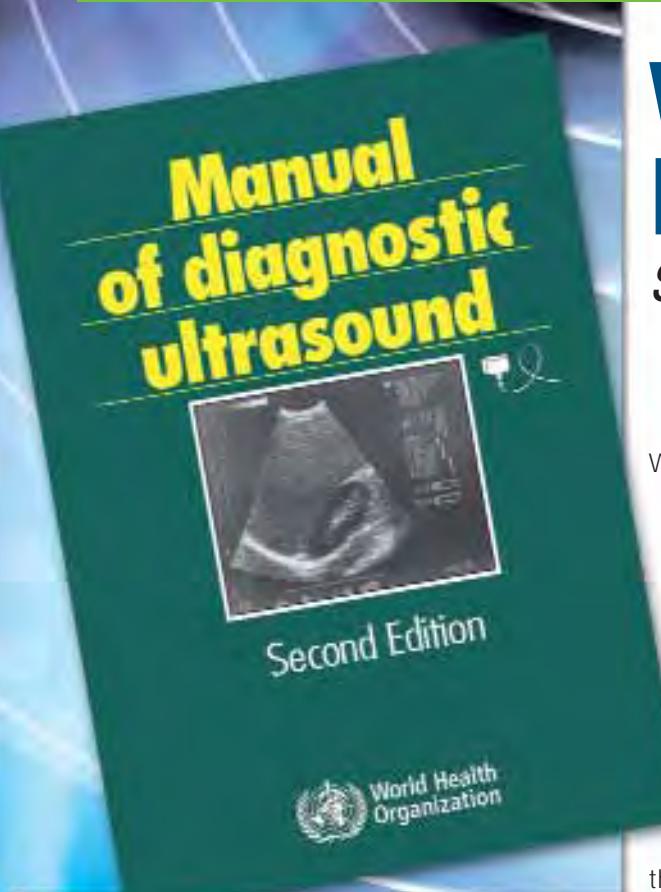

The Toolkit has been developed for public health and environmental professionals, regulators, industrial managers and other decision-makers with at least some training in the principles of risk assessment who are responsible for conducting human health risk assessments and making decisions on whether to take action to manage human health risks associated with exposure to chemicals.

WHO Manual of Diagnostic Ultrasound

Second Edition. Volume 1

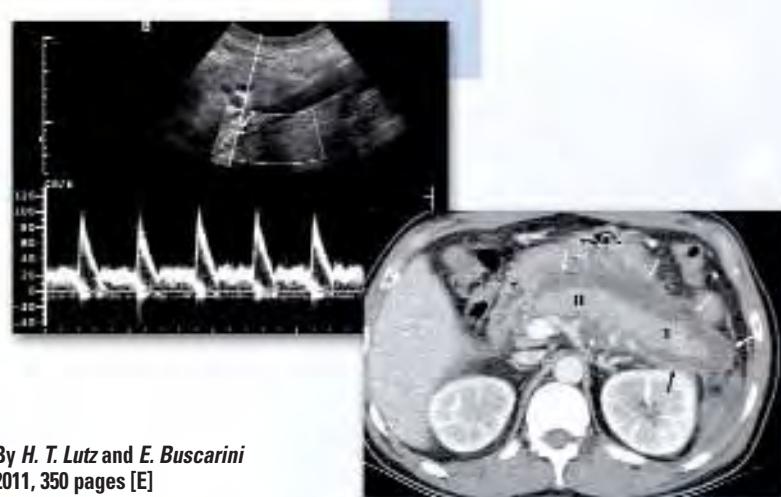

When the first edition of this manual was published in 1995, it quickly established itself as a reference work. In the intervening period, the rapid developments that have occurred in both ultrasound equipment and investigative techniques, including use of ultrasonography in the therapeutic domain, have necessitated publication of a totally new edition of this manual.

The present manual, a basic reference text that covers ultrasound techniques, recognition of normal anatomical features and differential diagnosis, is the first of two volumes of the second edition. Volume 2, which will cover paediatric examinations, gynaecology and musculoskeletal examinations, as well as therapy, will appear at a later date.

These new publications, which extensively cover modern diagnostic and therapeutic ultrasonography, will be of great use to medical professionals in both developed and developing countries.

Volume 1 begins with a chapter on the basic physics of ultrasound, including one dimensional A-, B-, and M-mode, B- mode two-dimensional, three-, four-dimensional and Doppler ultrasound. This is followed by a chapter on examination techniques. The subsequent fourteen chapters deal in turn with the diagnostic ultrasonography of each of the main organs of the body. The authors of the individual chapters are internationally recognized experts in their fields, while the book's editors are Professor Harald T. Lutz and Professor Elisabetta Buscarini.

The book is co-published by WHO and the World Federation for Ultrasound in Medicine and Biology.

By H. T. Lutz and E. Buscarini

WHO Recommendations on the Management of Diarrhoea and Pneumonia in HIV-Infected Infants and Children

Integrated Management of Childhood Illness (IMCI)

To improve survival and quality of life among the 2.5 million children living with HIV, a comprehensive package of prevention, care and treatment is required. This package should include management of infections such as pneumonia, diarrhoea, malaria and ear infections, as well as common opportunistic infections and HIV-related co-morbidities. WHO is developing a series of guidelines on each of these conditions, following the GRADE approach.

The document on the management of pneumonia and diarrhoea in HIV-infected infants and children is the first of this series. The recommendations are similar to those for non infected children, but they cover specific aspects related to HIV infection.

This publication is intended primarily for use by national advisory boards, national HIV/AIDS and child health programme managers and senior policy-makers involved in planning national strategies for child survival and paediatric prevention and care for HIV infection in resource-limited settings. Health-care providers and professional bodies could use these recommendations in advising national programmes and preparing guidelines for treatment and care.

World Report on Disability

Following the Convention on the Rights of Persons with Disabilities, attention has focused on ways to remove barriers to the participation of people with disabilities in their societies. Now a new publication, the first ever *World report on disability*, produced jointly by WHO and the World Bank, reviews evidence about the situation of disabled people, and offers directions for policy and practice, which can help overcome exclusion.

The report contains chapters on health; rehabilitation; assistance and support; enabling environments; education; and employment. The voices of people with disabilities themselves open each chapter, setting the scene for what follows. Within the chapters, case studies show how many countries have succeeded in promoting good practice. The diverse challenges faced in low, middle and high income settings are differentiated wherever possible.

Importantly, the report also includes the first new disability prevalence estimates since the 1970s. Global trends such as the ageing population, and the increasing importance of chronic diseases, mean that the prevalence of disability is likely to rise in the future. The report makes the case for better data collection, using the *International Classification of Functioning, Disability and Health*. Overall, there are major evidence gaps in the disability field, and the report argues that more research and disaggregated data are needed to show what works to improve the lives of persons with disabilities.

This pioneering report shows how removing barriers to mainstream services and investing in rehabilitation, support services and more accessible environments can ensure that millions of people with disabilities can participate in education, employment and wider society. At the intersection of public health, human rights and development, the *World report on disability* will be required reading for policy-makers, professionals, and advocates for people with disabilities and their families.

WHO Guidelines for Indoor Air Quality: Selected Pollutants

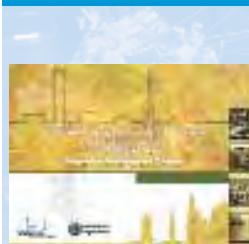

This book presents WHO guidelines for the protection of public health from a number of chemicals commonly present in indoor air. The substances considered - benzene, carbon monoxide, formaldehyde, naphthalene, nitrogen dioxide, polycyclic aromatic hydrocarbons (especially benzo[a]pyrene), radon, trichloroethylene and tetrachloroethylene - have indoor sources, are known for their hazardousness to health and are often found indoors in concentrations of concern to health.

For each substance, the chapter covers a general description, the sources and pathways of exposure, the indoor-outdoor relationship, kinetics and metabolism, the health effects, a health risk evaluation, the guidelines, a summary box and references.

These guidelines are targeted at public health professionals involved in preventing the health risks of environmental exposures, as well as at specialists and authorities involved in the design and use of buildings, indoor materials and products. They provide a scientific basis for legally enforceable standards.

Urbanization and Health

Health Equity and Vulnerable Populations.
Case studies from the Eastern Mediterranean Region

The five case-studies from the Eastern Mediterranean Region from Egypt, Morocco, Pakistan, Sudan and Tunisia presented in this publication provide a brief overview of the formidable health challenges faced in urban areas in the Region. The preliminary evidence presented by these studies provides a powerful argument for city planners, municipal authorities, nongovernmental organizations and civil society in their efforts to improve urban health.

It is intended to be used as an advocacy tool to sensitize policy-makers and parliamentarians to urban health issues and influence them to make positive changes. It underscores the need for intersectoral collaborative action by governments, health development partners, United Nations agencies, nongovernmental organizations, medical professionals, and civil society.

A Short Guide to Implementing the Healthy City Programme

Healthy city programmes have been implemented in countries of the WHO Eastern Mediterranean Region for 20 years. However, no universal systematic approach for the implementation of the healthy city programme has been established. World Health Day 2010 provided the opportunity to push forward the urbanization and health agenda by securing the political commitment of more than 200 cities in the Region.

Entrance into the regional healthy city network is contingent upon meeting certain criteria that qualify a city as a "healthy city". This concise, simple and practical guide is intended to help countries standardize their methods, mechanisms and processes of implementation of the healthy city programme and is particularly targeted at members of healthy city coordinating committees and programme trainers, as well as partners.

CD-ROM WISN Workload Indicators of Staffing Need

The WISN human resource planning and management tool gives health managers a way to analyze and calculate. The WISN approach is based on a health worker's workload, with activity (time) standards applied for each workload component.

Using the WISN approach allows health managers to:

- Determine how many health workers are required to cope with actual workload in a given facility
- Estimate staffing required to deliver expected services of a facility based on workload
- Calculate workload and time required to accomplish tasks of individual staff categories
- Compare staffing between health facilities and administrative areas
- Understand workload of staff at a given facility
- Establish fair workload distribution among staff
- Assess the workload pressure of the health workers in that facility.

The completely revised WISN User's Manual comes with accounts of the practical application of WISN in a number of countries. It also includes newly developed software to run WISN studies and an easy-to-follow software instruction manual. Health managers will now be able to standardize applications, avoid having to construct data entry tables every time a new study is undertaken, and, eventually, perform cross-facility and cross-country analysis of staff distribution, their workload and productivity.

Within national human resources planning, monitoring and evaluation cycles, this information will provide invaluable knowledge for establishing pragmatic and realistic health workforce staffing plans for all levels.

Evaluation of Certain Contaminants in Food

Seventy-second Report of the Joint FAO/WHO Expert Committee on Food Additives

This report represents the conclusions of a Joint FAO/WHO Expert Committee convened to evaluate the safety of various food contaminants, with the aim to advise on risk management options for the purpose of public health protection.

The first part of the report contains a general discussion of the principles governing the toxicological evaluation of contaminants and assessments of dietary exposure. A summary follows of the Committee's evaluations of technical, toxicological and dietary exposure data for certain food contaminants: acrylamide, arsenic, deoxynivalenol, furan, mercury and perchlorate.

Annexed to the report are tables summarizing the Committee's recommendations for dietary exposures and toxicological evaluations of the food contaminants considered.

Evaluation of Certain Food Additives and Contaminants

Seventy-third Report of the Joint FAO/WHO Expert Committee on Food Additives

This report represents the conclusions of a Joint FAO/WHO Expert Committee convened to evaluate the safety of various flavouring agents, with a view to concluding as to safety concerns and to preparing specifications for identity and purity. The Committee also evaluated the risk posed by two food contaminants, with the aim of deriving tolerable intakes where appropriate and advising on risk management options for the purpose of public health protection.

The first part of the report contains a general discussion of the principles governing the toxicological evaluation of and assessment of dietary exposure to food additives (particularly flavouring agents) and contaminants. A summary follows of the Committee's evaluations of technical, toxicological and dietary exposure data for 12 groups of flavouring agents (alicyclic ketones, secondary alcohols and related esters; alicyclic primary alcohols, aldehydes, acids and related esters; aliphatic acyclic and alicyclic α -diketones and related α -hydroxyketones; aliphatic acyclic and alicyclic terpenoid tertiary alcohols and structurally related substances; aliphatic and aromatic amines and amides; aliphatic lactones; aliphatic primary alcohols, aldehydes, carboxylic acids, acetals and esters containing additional oxygenated functional groups; aliphatic secondary alcohols, ketones and related esters and acetals; aromatic substituted secondary alcohols, ketones and related esters; benzyl derivatives; phenol and phenol derivatives; and simple aliphatic and aromatic sulfides and thiols) and two food contaminants (cadmium and lead).

Specifications for the following food additives were revised: activated carbon, cassia gum, indigotine, steviol glycosides, sucrose esters of fatty acids, sucrose monoesters of lauric, palmitic or stearic acid and titanium dioxide. Specifications for the following flavouring agents were revised: 4-carvomenthol and 5,6,7,8-tetrahydroquinoxaline.

Annexed to the report are tables summarizing the Committee's recommendations for dietary exposures to and toxicological evaluations of the flavouring agents and contaminants considered.

Pesticide Residues in Food 2009

Evaluations 2009, Part II - Toxicological

The monographs in this volume summarize the safety data on eight pesticides that could leave residues in food commodities. These pesticides are bifenthrin, cadusafos, chlorothalonil, chlorpyrifos-methyl, cycloxydim, fluopicolide, metaflumizone and spirodiclofen. The data summarized in the toxicological monographs served as the basis for the acceptable daily intakes and acute reference doses that were established by the Meeting.

This volume and previous volumes of JMPR toxicological evaluations, many of which were published in the FAO Plant Production and Protection Paper series, contain information that is useful to companies that produce pesticides, government regulatory officers, industrial testing laboratories, toxicological laboratories and universities.

Safety Evaluation of Certain Contaminants in Food

The detailed monographs in this volume summarize the technical, analytical, dietary exposure and toxicological data on a number of contaminants in food: acrylamide, arsenic, deoxydihydroxyacetone, furan, mercury and perchlorate.

This volume and others in the WHO Food Additives series contain information that is useful to those who produce and use food additives and veterinary drugs and those involved with controlling contaminants in food, government and food regulatory officers, industrial testing laboratories, toxicological laboratories and universities.

Safety Evaluation of Certain Food Additives and Contaminants

The toxicological monographs in this volume summarize the safety data on two contaminants in food: cadmium and lead. Monographs on nine groups of related flavouring agents evaluated by the Procedure for the Safety Evaluation of Flavouring Agents are also included.

This volume and others in the WHO Food Additives series contain information that is useful to those who produce and use food additives and veterinary drugs and those involved with controlling contaminants in food, government and food regulatory officers, industrial testing laboratories, toxicological laboratories and universities.

Tackling Antibiotic Resistance from a Food Safety Perspective in Europe

Antibiotics have revolutionized the treatment of infectious diseases. But their use and misuse have resulted in the development and spread of antibiotic resistance. This is now a significant health problem: each year in the European Union alone, over 25 000 people die from infections caused by antibiotic-resistant bacteria. Antibiotic resistance is also a food safety problem: antibiotic use in food animals – for treatment, disease prevention or growth promotion – allows resistant bacteria and resistance genes to spread from food animals to humans through the food-chain.

This publication explores the options for prevention and containment of antibiotic resistance in the food-chain through national coordination and international cooperation, including the regulation and reduction of antibiotic use in food animals, training and capacity building, surveillance of resistance trends and antibiotic usage, promotion of knowledge and research, and advocacy and communication to raise awareness of the issues.

This publication is primarily intended for policy-makers and authorities working in the public health, agriculture, food production and veterinary sectors, and offers them ways to take a holistic, intersectoral, multifaceted approach to this growing problem.

Monitoring the Building Blocks of Health Systems

A Handbook of Indicators and their Measurement Strategies

When working with countries to measure and compare health systems functioning, it is important to strike a good balance between avoiding blueprints that do not allow for country contexts and specificities while also encouraging a degree of standardization that enables comparisons within and between countries as well as over time. Standardized indicators allow comparisons between countries and can help mutual learning, including the identification of bottlenecks and the sharing of lessons learnt.

This handbook does not attempt to cover all components of the health system or deal with the various monitoring and evaluation frameworks. Instead, it is structured around the WHO framework that describes health systems in terms of six core components or "building blocks": service delivery, health workforce, health information systems, medical products, vaccines and technologies, financing and leadership/governance. The selection of indicators was guided by the need to detect change and show progress in health systems strengthening. Indicators relate to both the level and distribution of inputs and outputs. While the focus is on low- and middle-income countries, experiences from high-income countries are also used to guide the development of measurement systems.

Each section has proposed core indicators that all countries are encouraged to collect, plus a wider set of indicators that users can choose or modify as needed. It is anticipated that the core indicators will enable the production of country "dashboards" that contain the instruments by which health systems trends can be regularly monitored and compared. Countries should integrate new indicators with existing indicators of their health sector and statistical strategies and plans. Health systems monitoring should also be seen in the context of the indicators' impact on access to priority health services and their contribution to reaching the Millennium Development Goals (MDGs).

The handbook is divided into six sections, each of which covers one health system component or building block and is set out along the following lines:

- introduction to the component and related indicators;
- description of possible sources of information and available measurement strategies;
- proposed "core indicators", supplemented, where necessary, by additional indicators that may be used depending on the country health system attributes and needs.

Telemedicine

Opportunities and Developments in Member States.
Report on the Second Global Survey on eHealth 2009

The eHealth series is primarily meant for government ministries of health, information technology, and telecommunications, as well as others working in eHealth -academics, researchers, eHealth professionals, nongovernmental organizations, and donors. The telemedicine module of the 2009 survey examined the current level of development of four fields of telemedicine: teleradiology, teledermatology, telepathology, and telepsychology, as well as four mechanisms that facilitate the promotion and development of telemedicine solutions in the short- and long-term: the use of a national agency, national policy or strategy, scientific development, and evaluation.

Telemedicine - opportunities and developments in Member States discusses the results of the telemedicine module, which was completed by 114 countries (59% of Member States).

Integrating Poverty and Gender into Health Programmes: A sourcebook for Health Professionals

Module on Nutrition

The set of modules that comprise this Sourcebook are intended for use in pre-service and in-service training of health professionals. It is expected that this publication will also be of use to health policy-makers and programme managers, either as a reference document or in conjunction with in-service training.

This module is designed to improve the awareness, knowledge and skills of health professionals on poverty and gender concerns in the field of nutrition.

CD-ROM International Statistical Classification of Diseases and Health Related Problems (The) ICD-10. 2008 Edition. Training tool

This new electronic training tool is based on 17 years' practical experience in providing training for ICD-10 in the WHO Network for the Family of International Classifications (WHO-FIC). The modular structure of the new training tool means that courses can be tailored specifically to users needs - focusing either on different aspects of the classification or the whole classification.

The full training package consists of 28 sections, taking approximately 40 hours' to complete. Coders undertaking the full training will learn about classification context, how to use ICD-10 for morbidity and mortality coding, pitfalls in coding and analysis, basic medical science, statistical presentation of coded data, confidentiality and certification of causes of death.

Communicable Diseases in the Eastern Mediterranean Region

Prevention and control 2005 – 2009

In the WHO Eastern Mediterranean Region, communicable diseases are among the major causes of mortality and morbidity and pose major impediments to social and economic well-being. This report provides an overview of the status of communicable diseases in the Region, and progress in disease prevention and control during 2005–2009 through six visions.

Noncommunicable Disease Risk Factors and Socioeconomic Inequalities - What are the Links ? A Multicountry Analysis of Noncommunicable Disease Surveillance Data

This project identified countries in the Asia Pacific Region that have population-level surveillance data on noncommunicable disease (NCD) risk factors. Country teams were then set up to conduct a series of country-specific (re)analyses of the data, using a standardized protocol aimed to provide comparable cross-country analyses to examine the relationships between NCD (behavioural) risk factors and indicators of social disadvantage and socioeconomic status.

The report is divided into five chapters. Chapter 1 presents a review of the evidence on the relationships between NCD risk factors and socioeconomic status in developed and developing countries. Chapter 2 outlines the methodology for conducting the (re)analysis and provides a detailed summary of the cut-off points for NCD risk factors and socioeconomic status measures used by each country. Chapter 3 presents the country-specific results in terms of prevalence rates and independent associations between risk factors and socioeconomic status measures. Chapter 4 presents the cross-country comparison of associations between risk factors and socioeconomic status measures. Finally, Chapter 5 discusses the policy and programmes implications of these results.

Social Determinants Approaches to Public Health From Concept to Practice

The thirteen case studies contained in this publication were commissioned by the research node of the Knowledge Network on Priority Public Health Conditions (PPHC-KN), a WHO-based inter-departmental working group associated with the WHO Commission on Social Determinants of Health.

The case study project was overseen and managed by the WHO Department of Ethics, Equity, Trade and Human Rights (ETH) of the World Health Organization, in collaboration with the Special Programme for Research and Training in Tropical Diseases (TDR), the Special Programme of Research, Development and Research Training in Human Reproduction (HRP), and the Alliance for Health Policy and Systems Research (AHPSR).

The case studies describe a wealth of experiences with implementing public health programmes that intend to have an effect on social determinants and equity. They also document the real life challenges in implementing such programmes.

Policies and Incentives for Promoting Innovation in Antibiotic Research

High levels of pathogen resistance are rendering current antibiotics obsolete. Coupled with insufficient investment in discovering new treatments, multidrug-resistant infections are an increasingly urgent public health concern.

To curb the growth of antibiotic resistance and prevent major morbidity and mortality from multidrug-resistant bacterial infections, the overuse of antibiotics must be addressed and research and development for antibiotics with novel mechanisms of action actively promoted. This requires appropriately designed incentives for health and regulatory systems, in addition to economic incentives to attract academic interest and industry investment.

This book, commissioned by the Swedish Government from the European Observatory on Health Systems and Policies, analyses many proposed policies and incentive mechanisms and sheds light on the key issues that will help policy-makers reach informed, concrete decisions on how to avert this potential public health crisis.

Monitoring, Supervisory and Evaluation Tools for Community-based Initiatives

Investing in health, particularly that of the poor, is central to the achievement of the Millennium Development Goals. In support of this strategy WHO's Regional Office for the Eastern Mediterranean is actively promoting in countries of the Region community-based initiatives like Basic Development Needs, Healthy Cities, Healthy Villages and Women in Health and Development. These approaches are based on the principle that good health status—an important goal in its own right—is central to creating and sustaining capabilities of poor people to meet their basic needs and to escape from poverty.

The Community-based Initiatives Series is aimed at facilitating the management of such initiatives. Users of the series may include government authorities, community representatives, WHO and other international agencies and nongovernmental organizations.

Human Rights and Gender Equality in Health Sector Strategies How to Assess Policy Coherence

The overall aim of the tool is to enhance coherence between international obligations and commitments on human rights and gender equality, the national legal, policy and institutional frameworks, and their application in health sector strategies. The specific objectives of the tool are to assess the extent to which health sector strategies are consistent with, and promote, human rights standards and principles, including gender equality; Identify gender equality and human rights-related gaps and opportunities with respect to national commitments and health sector strategies, in order to facilitate effective and strategic health sector interventions; Generate a multi-stakeholder process and dialogue to address human rights and gender equality in relation to health.

The target-audience of the tool comprises the various actors involved in health planning and policy-making, implementation or monitoring of health sector strategies. This includes health policy-makers and planners, national human rights institutions, development partners and civil society organizations. Its use will vary depending on the specific context and focus of the assessment exercise.

Manual for the Laboratory Diagnosis and Virological Surveillance of Influenza

In many settings influenza is recognized as a major cause of disease and death. In other parts of the world, however, its epidemiology and the degree of its impact on human health remain relatively uncertain - in large part due to a lack of virological and disease surveillance.

WHO has developed this manual in order to strengthen the laboratory diagnosis and virological surveillance of influenza infection by providing standard methods for the collection, detection, isolation and characterization of viruses. The specific objectives of the manual include:

- increasing understanding of the principles and importance of haemagglutination and haemagglutination inhibition (HAI) testing in the identification of influenza virus field isolates, and in serological diagnosis using the WHO Influenza Reagent Kit;
- ensuring HAI test results are analysed and interpreted accurately by including the appropriate controls and recognizing potential problems in interpreting test results;
- increasing understanding of the principles of reverse transcription polymerase chain reaction (RT-PCR) and its application in the typing and subtyping of influenza viruses;
- highlighting the significance of influenza virus isolation as compared with direct antigen detection;
- increasing understanding of the principles of the microneutralization assay and its application to serological diagnosis;
- increasing understanding of the principles of the neuraminidase inhibition (NAI) assays used in the detection of virus strains resistant to antivirals.

All national and international influenza surveillance systems – including those for monitoring clinical disease – depend fundamentally upon the consistent and successful implementation of the key laboratory activities in these and other areas described in this manual.

mhGAP Intervention Guide for Mental, Neurological and Substance-use Disorders in non-specialized Health Settings

Mental health Gap Action Programme (mhGAP)

WHO recently launched the mental health Gap Action Programme (mhGAP) for low- and middle-income countries with the objective of scaling up care for mental, neurological and substance-use disorders.

This mhGAP Intervention Guide has been developed to facilitate mhGAP-related delivery of evidence-based interventions in non-specialized health-care settings.

The present model guide is based on a review of all the science available in this area and presents the interventions recommended for use in low- and middle-income countries. The Intervention Guide includes guidance on evidence-based interventions to identify and manage a number of priority conditions. The priority conditions included are depression, psychosis, bipolar disorders, epilepsy, developmental and behaviour disorders in children and adolescents, dementia, alcohol-use disorders, drug-use disorders, self-harm/suicide and other significant emotional or medically unexplained complaints. These priority conditions were selected because they represent a large burden in terms of mortality, morbidity or disability, have high economic costs, and are associated with violations of human rights. The guide is aimed at health-care providers working at first- and second-level facilities.

The Intervention Guide is brief so as to facilitate interventions by busy non-specialists in low- and middle-income countries. It describes in detail what to do but does not go into descriptions of how to do. It is important that the non-specialist health-care providers are trained in using the mhGAP Intervention Guide in assessing and managing people with mental, neurological and substance-use disorders.

"An excellent, practical manual for non-specialist health providers managing mental, neurological and substance abuse disorders at the primary and secondary levels of health care, in government as well as non-government led systems."

— Allen Foster, President, CB

"The fully evidence based WHO intervention guide will help us extend care to all persons with mental illness through the National and District Mental Health Programme in the country."

— K. Sujatha Rao, Secretary, Health & Family Welfare,
Government of India

WHO-AIMS Report on Mental Health Systems in the Eastern Mediterranean Region

This report summarizes descriptive data on mental health systems in 14 countries of the WHO Eastern Mediterranean Region using the WHO Assessment Instrument for Mental Health Systems (WHO-AIMS). The comprehensive and detailed information presented provides a better understanding of mental health systems in these countries than was hitherto available.

Results indicate that mental health resources and activities are scarce, inequitably distributed and inefficiently used; community-based mental health services are underdeveloped; mental health systems are often not well connected to other relevant sectors, such as the primary health care system and the employment sector; and insufficient attention is given to human rights.

This report highlights the urgent need for additional resources to be devoted to mental health care, more equitable distribution of resources, and a concerted effort to divert resources concentrated in mental hospitals towards community care.

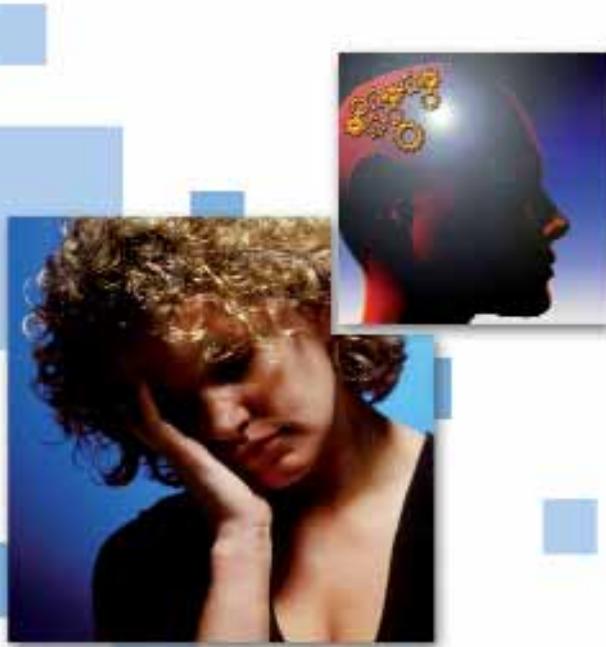

WHO Guidelines on Pharmacological Treatment of Persisting Pain in Children with Medical Illnesses

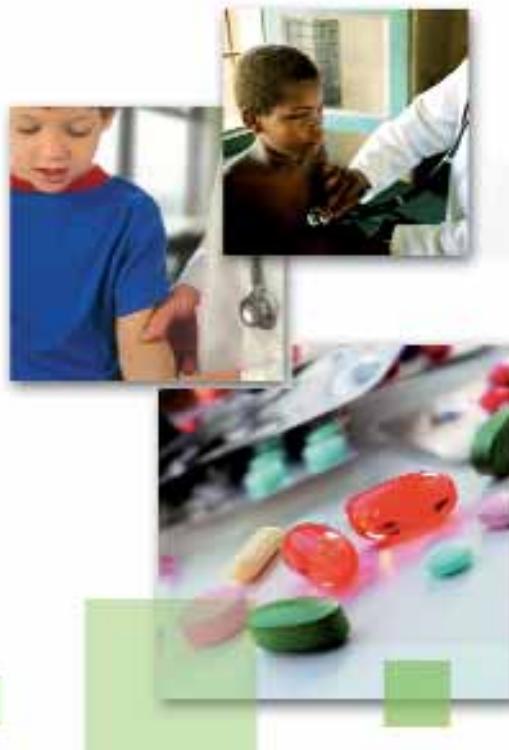

These guidelines have been developed to support countries to relieve pain in their paediatric populations. These guidelines address persisting pain in children caused by conditions such as cancer, HIV/AIDS, sickle-cell disease, burns, trauma, and phantom limb pain. Recommendations – developed following a careful and transparent appraisal of available evidence – are presented for the pharmacological treatment of mild, moderate and severe pain.

The guidelines include chapters on the various systems used to classify pain and on the evaluation of pain, which reviews the available tools for routine pain measurement in children. Provision of sustainable pain relief within health care systems is covered in a separate chapter.

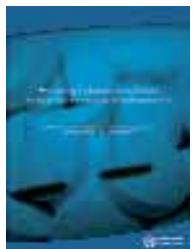

Since morphine and other opioid analgesics – required for the relief of moderate-to-severe pain in children – are listed under the 1961 UN Single Convention on Narcotic Drugs, the new guidelines include an annex explaining the Convention's requirements for the handling and procurement of opioid analgesics for the relief of pain.

Ensuring Balance in National Policies on Controlled Substances

Guidance for Availability and Accessibility for Controlled Medicines

This book provides guidance on policies and legislation with regards to availability, accessibility, affordability and control of medicines made from substances regulated under the international drug control conventions, herein referred to as "controlled medicines". Their scope encompasses "all controlled medicines", but with a specific focus on essential medicines. Controlled medicines play an important role in several areas of medicine, including pain treatment, treatment of opioid dependence, emergency obstetrics, psychiatry and neurology. The availability, accessibility and affordability of controlled medicines are important issues for all countries, but problematic for most of them.

This book elaborates on the background and then provides 21 guidelines on various topics: content of drug control legislation and policy; authorities and their role in the system; policy planning for availability and accessibility; healthcare professionals; estimates and statistics; procurement; and nationally listed drugs. Each guideline has an elucidation and a description of the legal context. The Country Assessment Checklist enables the user to determine which guidelines still need to be worked on. A CD-ROM provides additional information.

WHO Expert Committee on Specifications for Pharmaceutical Preparations

Forty-fifth Meeting Report

This report gives recommendations and provides independent international standards and guidelines in the area of quality assurance for implementation by WHO Member States, international organizations, United Nations agencies, regional and interregional harmonization efforts, as well as WHO's medicines' related programmes and initiatives.

During the 45th meeting the following new and revised guidelines were adopted and are thus annexed to the report: Procedure for adoption of ICRS (revised), Good Pharmacy Practice (joint FIP/WHO, revised), Guidance for Pharmaceutical Microbiology laboratories (new), Procedure for prequalification of laboratories (revised), WHO guidelines for preparing a laboratory information file, GMP: main principles (revised), GMP for blood establishments (jointly with ECBS), GMP for HVAC (revised), GMP for sterile pharmaceutical products (revised), Guidelines for preparing a Site Master File (new), Guiding principles on transfer of technology (new), Model guidance for the storage and transport of time- and temperature sensitive pharmaceutical products (new, jointly with ECBS), Guidance on submission of documentation for prequalification of innovator FPPs approved by stringent regulatory authorities (new), Procedure for prequalification of medicines (revised), Guideline for submission of documentation for a multisource (generic) finished product (new) and Special guidance for artemisinin as a starting material for production of antimalarials (subject to confirmation of impurity profile, new).

CD-ROM International Pharmacopoeia.

Fourth Edition

Including First and Second Supplements

This CD-ROM incorporates all new monographs, amendments and additions as adopted by the Expert Committee on Specifications for Pharmaceutical Preparations and is being published to include the First and Second Supplements of the Fourth Edition of *The International Pharmacopoeia*. Only the electronic version is being produced this time. Thus it will replace all former versions in a user-friendly way.

CD-ROM Quality Assurance of Pharmaceuticals

A Compendium of Guidelines and Related Materials

This CD-ROM includes the entire set of current WHO guidelines relating to quality assurance. All guidelines included in this collection have been prepared in consultation with the WHO Expert Advisory Panel on The International Pharmacopoeia and Pharmaceutical Preparations, with specialists from industry, national institutions, nongovernmental organizations, and others, through a vast global consultative process.

The draft guidelines are evaluated during the meetings of the WHO Expert Committee on Specifications for Pharmaceutical Preparations and, if found suitable, adopted as international standards. This is a comprehensive updated edition of the compendium and it includes all current text most of which were published in the WHO Technical Report Series and in the Vol. 1 and 2 of the printed version of the Quality Assurance of Pharmaceutical Compendium.

This compendium brings it together to make it more accessible and of greater practical value to those working in faculties of pharmacy, in medicines regulation and control, and in the pharmaceutical industry.

Medical Eligibility Criteria for Contraceptive Use Fourth Edition

Medical Eligibility Criteria for Contraceptive Use reviews the medical eligibility criteria for use of contraception, offering guidance on the safety of use of different methods for women and men with specific characteristics or known medical conditions. The recommendations are based on systematic reviews of available clinical and epidemiological research. It is a companion guideline to *Selected practice recommendations for contraceptive use*. Together, these books are intended to be used by policy-makers, programme managers, and the scientific community, to support national programmes in the preparation of service delivery guidelines.

The fourth edition of this useful resource supersedes previous editions, and has been fully updated and expanded. It includes over 86 new recommendations and 165 updates to recommendations in the previous edition. Guidance for populations with special needs is now provided, and a new annex details evidence on drug interactions from concomitant use of antiretroviral therapies and hormonal contraceptives. To assist users familiar with the third edition, new and updated recommendations are highlighted. Everyone involved in providing family planning services and contraception should have the fourth edition of *Medical Eligibility Criteria for Contraceptive Use* to hand.

WHO Medical Eligibility Criteria Wheel for Contraceptive Use, 2008 Update Pack of 20 Wheels

This wheel contains the medical eligibility criteria for starting use of contraceptive methods. It is based on the *Medical Eligibility Criteria for Contraceptive Use*, 3rd edition and its 2008 Update. This update of the MEC Wheel contains 25 new recommendations that tell family planning providers whether a woman presenting with a known medical or physical condition is able to use various contraceptive methods safely and effectively.

Notable changes include no restrictions on the use of any method for women diagnosed with mild cirrhosis, chronic hepatitis or who are carriers of viral hepatitis. In addition, the updated wheel includes new guidance on drug interactions. Now, women who take anticonvulsants (except lamotrigine), who are on antiretroviral therapy (except ritonavir-boosted ARVs), or have a deep vein thrombosis and are taking anticoagulant therapy are generally able to use any contraceptive method.

The wheel includes recommendations on initiating use of six common types of contraceptives:

1. Combined pills (low dose combined oral contraceptives)
2. Combined injectable contraceptives
3. Progestogen-only pills
4. Progestogen-only injectable, DMPA and NET-EN
5. Progestogen-only implants
6. Copper-bearing IUD.

World Health Statistics 2011

The World Health Statistics series is WHO's annual compilation of health-related data for its 193 Member States, and includes a summary of the progress made towards achieving the health-related Millennium Development Goals (MDGs) and associated targets.

As with previous versions, World Health Statistics 2011 has been compiled using publications and databases produced and maintained by the technical programmes and regional offices of WHO. Indicators have been included on the basis of their relevance to global public health, the availability and quality of the data, and the reliability and comparability of the resulting estimates. Taken together, these indicators provide a comprehensive summary of the current status of national health and health systems in key areas.

South-East Asia Regional Conference on Epidemiology: The Proceedings

The South-East Asia Regional Conference on Epidemiology was organized by WHO and the Indian Association of Epidemiologists, in partnership with the US Centers for Disease Control and Prevention (CDC), the World Bank, International Clinical Epidemiology Network (INCLEN), International Epidemiology Association, Public Health Foundation of India, McGill University, All India Institute of Medical Sciences and the Indian Council of Medical Research in March 2010.

The objectives of the conference were to promote the role of epidemiology in public health action and advocate for its application in national programme development and management. The conference concluded with some specific recommendations for follow-up and issued the Delhi Declaration on Epidemiology calling for a time-bound roadmap to be developed by all Member States.

This publication contains the full text of all papers presented at this conference.

Addressing the Harmful Use of Alcohol

A Guide to Developing Effective Alcohol Regulation

This legislation guide provides advice on approaches to alcohol regulation to support development of effective legislation appropriate to each country. It also provides practical advice based on international experience about the implications of legislative options, steps to be taken to implement legislation and best practice on how to enforce legislation and support compliance.

The policy options covered are taxation and pricing, regulating the sale of alcohol to the public, minimum age restrictions, alcohol marketing and drink driving.

Global Strategy to Reduce the Harmful Use of Alcohol

Every year, the harmful use of alcohol kills 2.5 million people, including 320 000 young people between 15 and 29 years of age. It is the eighth leading risk factor for deaths globally, and harmful use of alcohol was responsible for almost 4% of all deaths in the world, according to the estimates for 2004.

In addition to the resolution, a global strategy developed by WHO in close collaboration with Member States provides a portfolio of policy options and interventions for implementation at national level with the goal to reduce the harmful use of alcohol worldwide. Ten recommended target areas for policy options include health services' responses, community action, pricing policies and reducing the public health impact of illicit alcohol and informally produced alcohol. WHO was also requested to support countries in implementing the strategy and monitor progress at global, regional and national levels.

Tax Policies on Tobacco Products in Thailand

The Way Forward

In its efforts to control tobacco use, Thailand has used taxation as a price measure and increased excise tax rates significantly over time. This report suggests that a mechanism to raise the price of cigarettes at a rate higher than the inflation along with appropriate taxation on other tobacco products will make the taxation system more effective for tobacco control.

Global Status Report on Alcohol and Health

In recent years, a greater number of countries have been providing increasingly concise data, allowing WHO to create a more comprehensive picture of the global situation on alcohol use and its health consequences.

However, many gaps remain in the data, so a detailed exact picture cannot be clearly drawn for all countries and regions. This information is critical for monitoring progress in reducing the harmful use of alcohol at all levels and, since endorsement of the Global Strategy to Reduce the Harmful Use of Alcohol by the World Health Assembly, for monitoring and evaluation of progress made in implementation of the global strategy.

This new *Global Status Report on Alcohol and Health* presents a comprehensive perspective on the worldwide, regional and country consumption of alcohol, patterns of drinking, health consequences and policy responses in Member States.

It represents a continuing effort by WHO to support Member States with global information in their efforts to reduce the harmful use of alcohol and its health and social consequences.

European Status Report on Alcohol and Health 2010

The harmful use of alcohol creates a significant disease burden and in many countries causes public health problems leading to a substantial health, social and economic burden. Reducing the harmful use of alcohol is becoming a priority on the national, regional and global levels; it can be done by implementing strategies of proven effectiveness.

This report presents the latest data from the WHO European Region on alcohol consumption and harm and the responses made to them in countries. It summarizes the situation in the Region as a whole and gives profiles of the 53 countries Member States, presenting consolidated tables and graphs with data on some of the key indicators from the 2009 survey on alcohol and health. In addition, the report describes the WHO instruments and activities that are available to support countries in building the gains they have already made in this area.

Global Tuberculosis Control 2010

The main purpose of the report is to provide a comprehensive and up-to-date assessment of the TB epidemic and progress made in TB care and control at global, regional and country levels. This fifteenth annual report contains more up-to-date information than any previous report in the series, following earlier data collection and the completion of the production cycle within a calendar year.

This report includes the same wealth of information as previous reports in the series, but three new features are worth highlighting.

First, the data are more up-to-date than those included in previous reports. Data up to and including 2009 are presented for almost all key indicators; financial data extend to 2011.

Second, results from several analyses undertaken for the first time in 2010 are included. Examples are: (i) for each of the 22 high-burden countries (HBCs), trends in rates of TB incidence and mortality since 1990 combined with projections of whether the target of halving the 1990 mortality rate by 2015 will be achieved; (ii) estimates of the lives saved by TB control between 1995 and 2009 and projections of the additional lives that could be saved up to 2015, including separate estimates for women and children; (iii) assessment of progress in implementing and financing TB care and control against the targets included in a just-released and updated version of the Global Plan to Stop TB; and (iv) a new and compelling compilation of data showing the contribution that public-private-mix can make to case detection.

Third, country profiles are available for all countries (rather than the 22 HBCs only).

International Travel and Health 2011

Situation as on 1 January 2011

This book explains how travellers can stay healthy and provides WHO guidance on vaccinations, malaria chemoprophylaxis and treatment, personal protection against insects and other disease vectors, and safety in different environmental settings. It covers all the principal risks to travellers' health, both during their journeys and at their destinations.

It describes all relevant infectious diseases, including their causative agents, modes of transmission, clinical features and geographical distribution, and provides details of prophylactic and preventive measures.

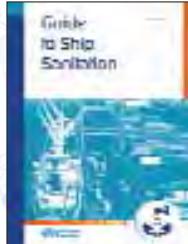

Features of this new edition include:

- updated and improved vaccine-preventable disease descriptions
- updated vaccine recommendations and schedules
- revised list of countries and areas at risk of yellow fever
- updated country list with malaria information
- updated maps showing disease distribution
- updated information for travellers with HIV

This book is intended for the medical and public health professionals who advise travellers, but it is also a standard reference for travel agents, airlines and shipping companies - and for travellers themselves.

Guide to Ship Sanitation

Third Edition

The WHO *Guide to Ship Sanitation* is referenced in the International Health Regulations and has become the official global reference on health requirements for ship construction and operation. Its purpose is to standardize the sanitary measures taken in ships, to safeguard the health of travellers and workers and to prevent the spread of infection from one country to another. The Guide was first published in 1967 and amended in 1987.

This revised 3rd edition of the Guide has been prepared to reflect the changes in construction, design and size of ships since the 1960s and the existence of new diseases (e.g. Legionnaires' disease) that were not foreseen when the 1967 Guide was published.

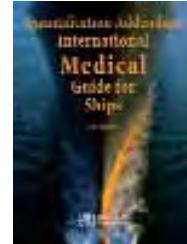

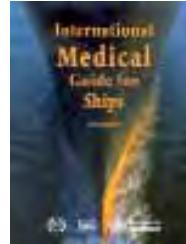

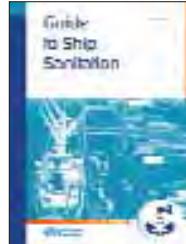

The Guide is divided into several chapters such as the introduction, water safety, food safety, recreational water environments, ballast water and waste disposal, Legionnaire's disease, persistent infectious agents and disease vectors. Each chapter consists of two main sections, "Background" and "Guidelines".

The "Background" section describes critical issues and supporting health evidence applicable to the specific topic of the chapter.

The "Guidelines" section in each chapter of the Guide provides user-targeted information and guidance applicable to the topic of the chapter, identifying responsibilities and providing examples of practices that can control public health risks, highlighting the most important aspects that need to be considered when setting priorities for action.

Working to Overcome the Global Impact of Neglected Tropical Diseases

First WHO Report on Neglected Tropical Diseases, 2010

Neglected tropical diseases blight the lives of a billion people worldwide and threaten the health of millions more. These close companions of poverty weaken impoverished populations, frustrate the achievement of health in the Millennium Development Goals and impede global public health outcomes.

Wider recognition of the public health significance of neglected tropical diseases and better knowledge of their epidemiology have stimulated necessary changes in public health thinking to approach and achieve control. The World Health Organization recommends five control strategies or intervention processes: preventive chemotherapy, intensified case management, vector control, veterinary public health, and safe water, sanitation and hygiene. Although one strategic approach may take the lead for the control of a specific disease or group of diseases, evidence suggests that more effective control follows when the five processes operate in combination and in the local context.

This report presents evidence to demonstrate that activities undertaken to prevent and control neglected tropical diseases are producing results - and that achievements are being recognized. By 2008, preventive chemotherapy had reached more than 670 million people in 75 countries.

Control of the Leishmaniases

Report of the WHO Expert Committee on the Control of Leishmaniases

This report makes recommendations on new therapeutic regimens for visceral and cutaneous leishmaniasis, on the use of rapid diagnostic tests, details on the management of Leishmania-HIV co-infection and consideration of social factors and climate change as risk factors for increased spread.

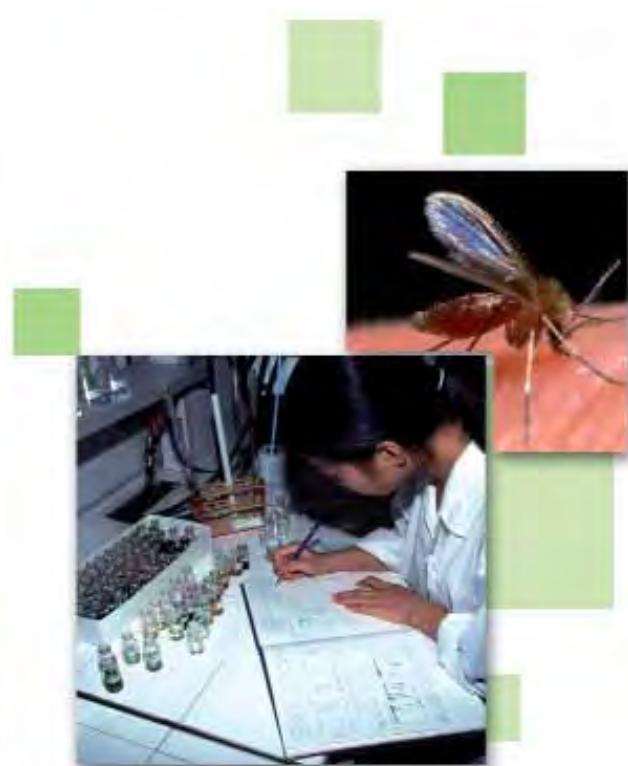

Recommendations for research include the furtherance of epidemiological knowledge of the disease and clinical studies to address the lack of an evidence-based therapeutic regimen for cutaneous and mucocutaneous leishmaniases and post-kala-azar dermal leishmaniasis (PKDL).

This report not only provides clear guidance on implementation but should also raise awareness about the global burden of leishmaniasis and its neglect. It puts forward directions for formulation of national control programmes and elaborates the strategic approaches in the fight against Leishmaniases.

The committee's work reflects the latest scientific and other relevant developments in the field of leishmaniasis that can be considered by member states when setting national programmes and making public health decisions.

World Malaria Report 2010

This report summarizes information received from 106 malaria-endemic countries and from malaria control partners. It highlights continued progress made towards meeting international targets for malaria control to be achieved by 2010 and by 2015. International funds disbursed for malaria control increased from US\$ 200 million in 2004 to US\$ 1.5 billion in 2009. Since 2008, more than 289 million insecticide-treated mosquito nets have been delivered to sub-Saharan Africa, enough to protect three quarters of the 765 million persons at risk of the disease.

Over the last decade, 11 countries in the Africa Region and 32 countries in other regions showed reductions of 50% or greater in either confirmed malaria cases or malaria admissions and deaths. Malaria control is making a major contribution to reducing mortality in children less than 5 years old and to attaining the health-related Millennium Development Goals.

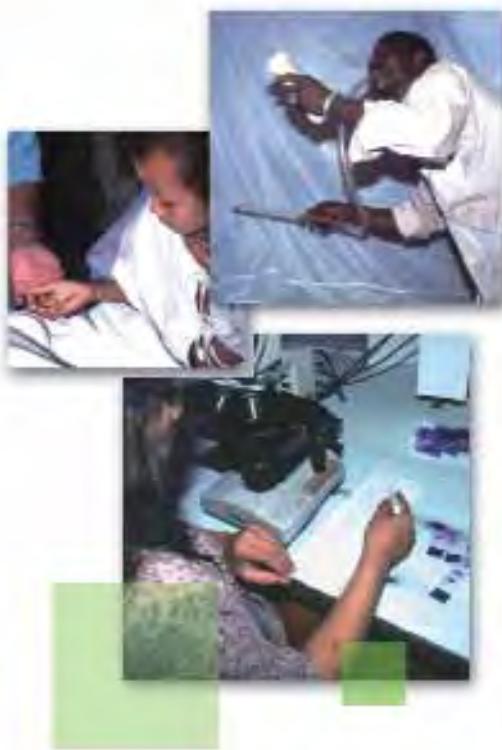

Operational Research in Tropical and other Communicable Diseases Final Report Summaries 2007-2008

The WHO Regional Office for the Eastern Mediterranean supports operational research projects in the area of communicable diseases. A main feature of this research activity is the active collaboration between the control programmes of the ministries of health and researchers from academic institutions. Together they target critical national health problems by turning them into research priorities and devising solutions.

This publication summarizes the outcomes of two rounds of the Small Grants Scheme for operational research in tropical and other communicable diseases during 2005 and 2006. It is the fourth issue in a series that is produced every biennium to disseminate research results to national control programmes and the international scientific community.

It is hoped that these research results will be translated into policy and practice, thereby achieving progress towards equity in health and avoiding the unnecessary waste of limited resources that would result from the duplication of research funding or the ineffective implementation of control measures. This publication is also a call for action: a plea that these recently produced results are utilized and implemented in order to address the challenges of communicable disease control.

**Comprehensive Guidelines
for Prevention and Control of Dengue
and Dengue Haemorrhagic Fever**
Revised and Expanded

Dengue Fever is the fastest emerging arboviral infection with major public health consequences for millions of people around the world, and in particular the South-East Asia region. These regional guidelines were extensively revised, updated and expanded with the focus on new and additional topics of current relevance to the populations of the region.

They are intended to provide guidance to national and local-level programme managers and public health officials, as well as stakeholders, including health practitioners, laboratory personnel and multisectoral partners, in strategic planning, implementation, monitoring and evaluation, and strengthening the response to dengue prevention and control in their countries. Scientists and researchers involved in vaccine and antiviral drug development will also find crucial baseline information in this publication.

**Traditional Herbal Remedies
for Primary Health Care**

This publication contains 28 monographs on common ailments which can be readily treated with simple herbal remedies. They can be prepared easily and used within the ambit of primary health care. Each monograph provides description of the ailment, the form of traditional preparation, its composition, English name, Latin name and family of the plant, plant part used, main chemical constituents, quality standards, method of preparation, dosage form, therapeutic properties, indications and uses, dose and mode of administration, precautions and safety aspects, and important references.

This manual can be used by health planners, policy makers, national and district health authorities and others involved in the health sector development and reform. It is also an attempt to increase availability and accessibility to cost-effective treatment of commonly encountered health problems with herbal remedies. It will be useful for education and training of community health workers as well.

Guidelines for Drinking-water Quality

Fourth Edition

This fourth edition of the World Health Organization's *Guidelines for Drinking-water Quality* builds on over 50 years of guidance by WHO on drinking-water quality, which has formed an authoritative basis for the setting of national regulations and standards for water safety in support of public health.

It is the product of significant revisions to clarify and elaborate on ways of implementing its recommendations of contextual hazard identification and risk management, through the establishment of health-based targets, catchment-to-consumer water safety plans and independent surveillance. It reflects the renewed focus on primary prevention.

Significant additional guidance on good practice is presented, incorporating changes introduced by the first and second addenda to the third edition. Emerging water management issues are comprehensively addressed for a range of circumstances, from household water treatment and safe storage and the bulk supply of water over long distances to the potential implications of climate change.

Additional risk assessments are presented for a number of new chemical and microbial hazards and applied to a suite of pesticides used for public health purposes. Existing reviews on chemicals and waterborne pathogens have been revised to account for new scientific information. The chapter on radiological aspects of drinking-water quality has been comprehensively updated.

Even more than the previous edition, this new edition emphasizes achievable practices and the formulation of sound regulations, applicable to low-income, middle-income and industrialized countries alike, that aim to prevent a potential health crisis caused by the consumption of unsafe drinking-water, against the backdrop of rapid urbanization, water scarcity and climate change.

Sanitation and Hygiene in East Asia

The main objectives of this report is to provide an overview of the status of sanitation in East Asia to support decisions and recommendations in light of the collective governments' commitments expressed in the Beppu Declaration on 1 December 2007.

The countries included in this analysis are those of the East Asia Region. The report provides different scenarios to stimulate discussion about strengthening and making operational the EASAN Platform, including the formation of a steering committee and a secretariat responsible for putting into effect action agreed upon at EASAN forums.

Water Safety in Buildings

This book provides guidance for managing water supplies in buildings where people may drink water, use water for food preparation, wash, shower, swim or use water for other recreational activities or be exposed to aerosols produced by water-using devices, such as cooling towers. These uses occur in a variety of buildings, such as hospitals, schools, child and aged care, medical and dental facilities, hotels, apartment blocks, sport centres, commercial buildings and transport terminals.

This publication is one of a series of supporting documents that provide guidance on implementing the World Health Organization's *Guidelines for Drinking-water Quality*. It is intended to support the improvement of water safety within buildings.

The target audience for this book includes the full range of 'actors' who influence the overall safe management of building water supplies. In particular, it is directed at those who design, construct, manage, operate, maintain and regulate building water systems. This book is intended to be a useful resource for the development of training and information material.

Bulletin of the World Health Organization

The International Journal of Public Health

The *Bulletin* is one of the world's leading public health journals. It is a peer-reviewed monthly with a special focus on developing countries, giving it unrivalled global scope and authority.

In 2009, the *Bulletin* was named as being in the top 10 public and environmental health journals for impact, according to the Institute of Scientific Information (ISI). It is essential reading for all public health decision-makers and researchers who require its special blend of research, well-informed opinion and news.

The journal is printed on 100% recycled paper and is also available online.

Published monthly,
ca 80 pages per issue

2011: volume 89
Subscription rate:
CHF/US\$ 331.00 (economy mail)

Special focus on chronic diseases

How are countries coping with a growing burden of chronic diseases? What public health measures best enable people to enjoy healthier, longer lives? In 2011, the *Bulletin* will have a special focus on treatment, prevention and cure of chronic diseases. A wide selection of articles will include China's response to the obesity epidemic, Russia's alcohol control measures and Romania's disease prevention programmes. These articles are background to *April's First global ministerial conference on healthy lifestyles and noncommunicable disease control* and September's *High-level Meeting of the United Nations General Assembly on the Prevention and Control of Noncommunicable Diseases*.

These articles will showcase policies and programmes for:

- chronic diseases prevention
- health promotion
- disability
- mental health
- substance abuse
- nutrition
- tobacco control
- and violence and injury prevention

Some of the *Bulletin's* advantages

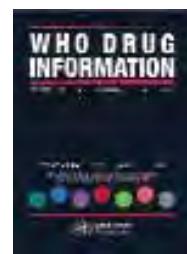

- High citation parameters:
2009 impact factor 5.3
- Rigorous peer review
- High readability
- Monthly website stats (2009):
839 977 page views,
230 800 downloads

Mental Health

mhGAP Intervention Guide for Mental, Neurological and Substance Use Disorders in Non-specialized Health Settings

The mhGAP intervention guide (mhGAP-IG) presents integrated management of priority conditions using protocols for clinical decision-making. The priority conditions included are: depression, psychosis, bipolar disorders, epilepsy, developmental and behavioural disorders in children and adolescents, dementia, alcohol use disorders, drug use disorders, self-harm/suicide and other significant emotional or medically unexplained complaints. The mhGAP-IG can be used by health-care providers working in non-specialized health-care settings after adaptation for national and local needs.

2010, ISBN 978 92 4 154806 9, 90 pages

Mental Health and Development

This new report presents compelling evidence that persons with mental and psychosocial disabilities are a vulnerable group but continue to be marginalized in terms of development aid and government attention. It makes the case for reaching out to this group through the design and implementation of appropriate policies and programmes and through the inclusion of mental health interventions into broader poverty reduction and development strategies. The report also describes a number of key interventions which can provide a starting point for these efforts.

2010, ISBN 978 92 4 156394 9, 102 pages

WHO Classifications

WHODAS 2.0 Measuring Health and Disability

WHODAS 2.0 is a practical instrument to measure general health and disability levels. It is based on the *International Classification of Functioning, Disability and Health* (ICF). It can be used as a general measure applicable in different cultures both in clinical settings or in general populations across all diseases, including mental, neurological and addictive disorders. This manual presents short and full versions of the WHODAS 2.0 together with practical guidelines on how to use them effectively.

2010, ISBN 978 92 4 154759 8, 151 pages

CD-ROM International Statistical Classification of Diseases and Health Related Problems (The) ICD-10. 2008 Edition. Training tool

This new electronic training tool is based on 17 years' practical experience in providing training for ICD-10 in the WHO Network for the Family of International Classifications (WHO-FIC). The modular structure of the training tool means that courses can be tailored specifically to users' needs - focusing either on different aspects of the classification or the whole classification.

2010, CD-ROM, ISBN 978 92 4 154781 9

Food Safety and Travel

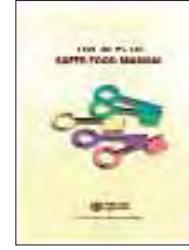

International Travel and Health 2011

This book covers all the principal risks to travellers' health, both during their journeys and at their destinations. It describes all relevant infectious diseases, including their causative agents, modes of transmission, clinical features and geographical distribution, and provides details of prophylactic and preventive measures. This book is designed for medical and public health professionals who advise travellers, but it is also a standard reference for travel agents, airlines, shipping companies and travellers themselves.

A Guide on Safe Food for Travellers

This leaflet gives practical advice and basic hints on how to eat safely, and what to do in case of diarrhoea. Information in the leaflet was prepared by the WHO Programmes on Food Safety and Diarrhoeal Disease Control, and has been endorsed by the World Tourism Organization and the International Tourist Health Association.

Five Keys to Safer Food Manual

This manual elaborates the core food safety information provided in the WHO Five Keys to Safer Food poster and suggests how to communicate these messages. The manual also provides tips on how to adapt the training programme for different target groups (e.g. professional food handlers, consumers, children and women).

2011, ISBN 978 92 4 158046 5, 250 pages

2007, ISBN 978 92 4 159766 1, 4 pages

2006, ISBN 978 92 4 159463 9, 25 pages

Gender, Women and Health

Women and Health: Today's evidence tomorrow's agenda

This is a report on women and health – both women's health needs and their contribution to the health of societies. Women's health has long been a concern for WHO but today it has become an urgent priority. This report explains why. Using current data, it takes stock of what we know now about the health of women throughout their lives and across the different regions of the world.

Sex, Gender and Influenza in Achieving Gender Equality and Health Equity

This publication focuses on the different effects of seasonal epidemics, pandemics and localized outbreaks of influenza on males and females including pregnant women. It concludes that significantly more research is required to gain a more complete understanding of the complex and varied effects of sex and gender on influenza infection and vaccination, and underscores the need to consider their interplay with any infectious disease of global concern.

Counselling for Maternal and Newborn Health Care

The main aim of this practical handbook is to strengthen counselling and communication skills of skilled attendants (SAs) and other health-care providers, helping them to effectively discuss with women, families and communities the key issues surrounding pregnancy, childbirth, postpartum, postnatal and post-abortion care. It relies on a self-directed learning approach, allowing SAs to work at their own pace, drawing on their past counselling experience.

2009, ISBN 978 92 4 156385 7, 107 pages

2010, ISBN 978 92 4 150011 1, 58 pages

2010, ISBN 978 92 4 154762 8, 232 pages

Patient Safety and Hygiene

WHO Guidelines on Hand Hygiene in Health Care

These guidelines provide health-care workers, hospital administrators and health authorities with a thorough review of evidence on hand hygiene in health care and specific recommendations to improve practices and reduce transmission of pathogenic microorganisms to patients and health-care workers.

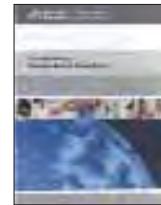

2009, ISBN 978 92 4 159790 6, 270 pages

WHO Guidelines for Safe Surgery

These guidelines aim to help to promote practice standards that reduce injuries and save lives. There is wide recognition that every country can improve the safety of its surgical care and that this is a critical matter of public health, affecting hundreds of millions of people worldwide each year. These useful guidelines have undergone final review and testing at pilot sites around the world.

2009, ISBN 978 92 4 159855 2, 133 pages

WHO Patient Safety Curriculum Guide for Medical Schools

This Curriculum Guide aims to encourage and facilitate the teaching of patient safety topics to medical students. The Curriculum Guide is divided into two sections. The first part is aimed at increasing the skills and knowledge of the teachers – a “train-the-trainer” manual. The second part focuses on core skills and knowledge on patient safety that should be taught.

2009, ISBN 978 92 4 159831 6, 258 pages

Cancer Treatment & Noncommunicable Diseases

WHO Guidelines on the Pharmacological Treatment of Persisting Pain in Children with Medical Illnesses

These guidelines have been developed to support countries to relieve pain in their paediatric populations. They address persisting pain in children caused by conditions such as cancer, HIV/AIDS, sickle-cell disease, burns, trauma, and phantom limb pain. Recommendations are presented for the pharmacological treatment of mild, moderate and severe pain. The guidelines include chapters on the various systems used to classify pain and on the evaluation of pain, which reviews the available tools for routine pain measurement in children. Provision of sustainable pain relief within health care systems is covered in a separate chapter.

2011, ISBN 978 92 4 15xxxxx, 250 pages

Ensuring Balance in National Policies on Controlled Substances

This book provides guidance on policies and legislation with regards to availability, accessibility, affordability and control of medicines made from substances regulated under the international drug control conventions. Controlled medicines play an important role in several areas of medicine, including pain treatment, treatment of opioid dependence, emergency obstetrics, psychiatry and neurology. This book elaborates on the background and then provides 21 guidelines. Each guideline has an elucidation and a description of the legal context. The Country Assessment Checklist enables the user to determine which guidelines still need to be worked on. A CD-ROM provides additional information.

2011, ISBN 978 92 4 156417 5, 72 pages

Package of Essential Noncommunicable (PEN) Disease Interventions for Primary Health Care in Low-resource Settings

This Package for primary care in low-resource settings is an innovative and action-oriented response to essential interventions in the field of noncommunicable disease. It provides a prioritized set of cost-effective interventions that can be delivered to an acceptable quality of care, even in resource-poor settings. It will reinforce health system strengthening by contributing to the building blocks of the health system. Cost effectiveness of the selected interventions will help to make limited resources go further and the user-friendly nature of the tools that have been developed, will empower primary care physicians as well as allied health workers to contribute to NCD care.

Journals

Bulletin of the World Health Organization

The *Bulletin of the World Health Organization* is an international journal of public health with a special focus on developing countries. Since it was first published in 1948, the *Bulletin* has become one of the world's leading public health journals. As the flagship periodical of the World Health Organization (WHO), the *Bulletin* draws on WHO experts as editorial advisers, reviewers and authors as well as on external collaborators.

ISSN: 0042-9686 (Monthly)

WHO Drug Information

WHO Drug Information communicates pharmaceutical information that is either developed and issued by WHO or transmitted to WHO by research and regulatory agencies throughout the World. The journal also includes regular presentations of newly proposed and recommended International Nonproprietary Names (INN) for Pharmaceuticals Substances.

ISSN: 1010-9609 (Quarterly)

Pharmaceuticals

WHO Expert Committee on Specifications for Pharmaceutical Preparations Forty-fourth Report

This report provides the following guidelines adopted and recommended by the Committee: WHO good practices for pharmaceutical quality control laboratories; WHO supplementary guideline for active pharmaceutical ingredients; WHO good manufacturing practices for pharmaceutical products containing hazardous substances; WHO good manufacturing practices for sterile pharmaceutical products; WHO good distribution practices for pharmaceutical products; Guideline on the requalification of prequalified dossiers, and Guideline for the preparation of a contract research organization master file.

2010, ISBN 978 92 4 120957 1, 287 pages

CD-ROM International Pharmacopoeia. Fourth Edition. Including First and Second Supplements

This CD-ROM incorporates all new monographs, amendments and additions as adopted by the Expert Committee on Specifications for Pharmaceutical Preparations and published as being part of the First and Second Supplements of the 4th edition of the *International Pharmacopoeia*.

2011 (CD-ROM) ISBN 978 92 4 154813 7

CD-ROM Quality Assurance of Pharmaceuticals

This CD-ROM includes the entire set of current WHO guidelines relating to quality assurance. All guidelines included in this collection have been prepared in consultation with the WHO Expert Advisory Panel on The International Pharmacopoeia and Pharmaceutical Preparations, with specialists from industry, national institutions, nongovernmental organizations, etc., through a vast global consultative process. The draft guidelines are evaluated during the meetings of the WHO Expert Committee on Specifications for Pharmaceutical Preparations and, if found suitable, adopted as international standards.

2011 (CD-ROM) ISBN 978 92 4 154814 4

The World Health Report 2010: Health Systems Financing

In this report, WHO maps out what countries can do to modify their financing systems so they can move more quickly towards this goal - universal coverage - and sustain the gains that have been achieved. The report builds on new research and lessons learnt from country experience. It provides an action agenda for countries at all stages of development and proposes ways that the international community can better support efforts in low income countries to achieve universal coverage and improve health outcomes.

2010, ISBN 978 92 4 156402 1, 128 pages

Community-based Rehabilitation: CBR Guidelines

These guidelines provide guidance on how to develop and strengthen CBR programmes; and promote CBR as a strategy for community-based development involving people with disabilities. They support stakeholders to meet the basic needs and enhance the quality of life of people with disabilities and their families and encourage the empowerment of people with disabilities and their families.

2010, ISBN 978 92 4 154805 2, 452 pages

Atlas on Substance Use (2010)

This Atlas provides a structured description of available prevention and treatment resources for substance use disorders in WHO regions, different income economies and the world. The report is based on a survey instrument and has been accomplished through collaboration with WHO regional and country offices, national focal points and a number of leading experts in the field of psychoactive substance use.

2010, ISBN 978 92 4 150061 6, 122 pages

Casebook on Ethical Issues in International Health Research

This book collects 64 case studies, each of which raises an important and difficult ethical issue connected with planning, reviewing, or conducting health-related research. The book's purpose is to contribute to thoughtful analysis of these issues by researchers and members of research ethics committees particularly those involved with studies that are conducted or sponsored internationally. This collection is envisioned principally as a tool to aid educational programmes, from short workshops on research ethics to in-service learning for scientists and REC members, to formal degree or certificate courses. To assist those using these case studies in their classrooms and workshops, a teaching guide has been included. Winner of the BMA Medical Book Award in 2010.

2010, ISBN 978 92 4 150061 6, 122 pages

About WHO Publications

Health Topics: Infectious disease, chronic illness, mental health, disability and injury, nutrition, healthy lifestyle, healthy environments, pharmaceuticals, emergency care, health service planning, etc.

Publication range: Guidelines, norms and standards, expert meeting reports, newsletters, public health journals, etc.

Target audiences:

- Small yet strategically placed audiences: political leaders and government ministries;
- Larger audiences: professional groups. Administrators, scientists, medical personnel, and staff in a range of health-related occupations.

Education, Management and
Policy Context for Strategic
Planning of Human Resources
for Health**
**Оценка финансирования,
образования, управления и
политического контекста для
стратегического планирования
кадровых ресурсов
здравоохранения**

В этой книге описывается метод оценки систем финансирования, образования и управления, а также политического контекста, необходимого для стратегического планирования и разработки политики в отношении кадровых ресурсов здравоохранения. Это методическое пособие разработано в качестве основанного на фактических данных всестороннего диагностического средства для информированной разработки политики в отношении трудовых ресурсов здравоохранения в странах с низким и средним уровнем дохода. Такая оценка производится в три этапа: путем оценки текущего статуса кадровых ресурсов здравоохранения и потенциальных возможностей для проведения политики в отношении кадровых ресурсов здравоохранения с особым акцентом на четырех аспектах – финансировании, образовании, управлении и формировании политики; путем выявления приоритетных требований и действий на основе текущего статуса кадровых ресурсов здравоохранения и путем демонстрации того, как направлять политику и составлять план действий с установлением их очередности в отношении кадровых ресурсов здравоохранения.

Health Systems Financing: The Path to Universal Coverage
**Доклад о состоянии
здравоохранения в мире, 2010 г.
Финансирование систем
здравоохранения: путь к
всеобщему охвату населения
медицинской помощью**

В настоящем докладе Всемирная организация здравоохранения показывает, что могут сделать страны для модификации своих финансовых систем, чтобы быстрее двигаться к достижению этой цели – обеспечению всеобщего охвата населения медицинской помощью – и закрепить достигнутые успехи. Доклад основан на результатах новых исследований и уроков, извлеченных из опыта стран. В нем содержится план действий для стран на всех уровнях развития и предлагаются пути, позволяющие международному сообществу оказывать более эффективную поддержку усилиям стран с низким доходом по достижению всеобщего охвата населения медицинской помощью и улучшению результатов лечения.

World Health Statistics 2010
**Мировая статистика
здравоохранения, 2010 год**

В издании “Мировая статистика здравоохранения, 2010 год” приводится ежегодная подборка данных ВОЗ, поступивших из 193 ее государств-членов, а также кратко характеризуются успехи в достижении связанных со здравоохранением целей и задач в области развития, сформулированных в Декларации тысячелетия. Оно содержит сводную информацию, всесторонне характеризующую текущее состояние здоровья населения и национальных систем здравоохранения, включая такие аспекты, как смертность и бремя болезней, причины смерти, регистрируемые инфекционные заболевания, охват услугами здравоохранения, факторы риска, ресурсы систем здравоохранения, расходы на здравоохранение, неравенство в отношении здоровья, а также демографические и социоэкономические статистические данные.

The Blue Trunk Library

The Blue Trunk Library has been developed by the library of the World Health Organization for installation in district health centres in Africa as a means of compensating for the lack of up-to-date medical and health information. After 12 years of existence more than 1900 libraries have been distributed to health districts in poor countries of the world, where health information access is difficult. Training workshops, for the optimal use of the information contained in each blue trunk, was also provided to more than 550 health professionals during this period.

The collection, which is organized according to major health subjects, contains more than one hundred books on medicine and public health. The collection has recently been revised and updated with the latest information available.

Among the works chosen, priority has been given to practical manuals (especially those published by WHO) offering easily accessible solutions to the medical, public health and management problems medical staff may have to face.

Differing levels of education among district medical staff have also been taken into account. The same topic may be addressed in different publications from a different point of view: that of the physician, the nurse, the nursing auxiliary or health worker.

In order to make it easier to transport and store, the collection has been packed into a blue metal trunk fitted with two shelves on which cardboard boxes containing the books are arranged by field of interest.

"...Blue trunk libraries have a promising future in Africa..."

— Dr Jacques Courtejoie, Center for Health Promotion,
Democratic Republic of Congo

*"... a trusted source of information,
easy to use..."*

Stratégie mondiale visant à réduire l'usage nocif de l'alcool

On estime que l'usage nocif de l'alcool entraîne 2,5 millions de décès chaque année, en grande partie parmi les jeunes. La consommation d'alcool est le troisième facteur de risque de maladie dans le monde.

La stratégie mondiale visant à réduire l'usage nocif de l'alcool, approuvée par la Soixante-Troisième Assemblée mondiale de la Santé en mai 2010, reconnaît que l'usage nocif de l'alcool et le développement socioéconomique sont étroitement liés.

Des solutions applicables existent et la stratégie mondiale propose plusieurs politiques et interventions dont la mise en oeuvre doit être envisagée dans chaque pays, dans le cadre de la politique nationale mais aussi dans des cadres de développement plus larges. La stratégie mondiale définit également des domaines prioritaires où l'action mondiale est destinée à promouvoir, soutenir et compléter les mesures prises aux niveaux local, national et régional.

Utilisation de la ventilation naturelle pour lutter contre les infections en milieu de soins

Une ventilation bien conçue peut réduire la transmission d'infections en milieu de soins, et la ventilation naturelle constitue parfois une mesure environnementale efficace pour faire obstacle à la propagation d'infections. Lorsque l'environnement s'y prête, la ventilation naturelle peut être la solution retenue pour réduire les risques infectieux dans le secteur de la santé.

Après une définition de la ventilation et de la ventilation naturelle, le présent guide analyse les exigences auxquelles doit satisfaire la ventilation naturelle dans le contexte de la lutte contre les infections, et expose les principes généraux de conception, de construction, d'exploitation et de maintenance applicables pour que les systèmes de ventilation naturelle soient un instrument efficace de lutte contre l'infection dans les établissements de soins.

Ce guide s'adresse aux praticiens et aux soignants chargés de la lutte contre l'infection, ainsi qu'aux professionnels de santé, ingénieurs et architectes intervenant dans le domaine de la réduction des risques biologiques au sein des structures de santé.

La face cachée des villes

Mettre au jour et vaincre les inégalités en santé en milieu urbain

Ce rapport constitue une composante importante de la stratégie générale de l'OMS et d'ONU-Habitat visant à renforcer les interventions des acteurs de la santé au niveau local, national et mondial en vue de réduire les inégalités en santé dans un monde toujours plus urbanisé. Il montre que les citadins pauvres sont particulièrement exposés à une multitude de maladies et de problèmes de santé, imputables à des disparités dans le contexte social et les conditions de vie.

En outre, il propose des informations reposant sur des données factuelles et des outils dont les autorités sanitaires et municipales peuvent se servir pour lutter contre les inégalités en santé dans leur ville.

Guide pratique pour l'élaboration et la mise en œuvre d'une politique scolaire sur l'alimentation et l'exercice physique

Ce guide s'appuie sur le cadre pour une politique scolaire sur l'alimentation et l'exercice physique de l'OMS. C'est un outil pratique qui facilite l'adoption, l'adaptation et la mise en œuvre du cadre pour une politique scolaire de la Stratégie mondiale pour l'alimentation, l'exercice physique et la santé.

Il est axé sur l'action gouvernementale visant à améliorer les pratiques alimentaires et augmenter l'exercice physique dans les écoles aux niveaux national et sous-national, action qui est concentrée sur l'environnement, les comportements et l'éducation.

Il est organisé en quatre parties : préparation et analyse de la situation ; définition de buts et objectifs politiques ; sélection et mise en œuvre d'options de politiques ; et suivi et évaluation des processus et résultats.

Guide de réadaptation à base communautaire (RBC)

Les cinq dernières années ont été l'occasion pour les acteurs de la RBC de travailler en étroite collaboration pour la mise en œuvre *De ce Guide de la RBC* qui se base sur les principales recommandations adoptées en 2003, lors de la Consultation internationale consacrée à l'examen de la réadaptation à base communautaire à Helsinki, et en 2004, dans le document d'orientation conjoint sur la RBC de l'OIT (Organisation Internationale du travail), l'UNESCO (Organisation des Nations Unies pour l'éducation, la science et la culture) et l'OMS. Le Guide soutient / considère que la RBC est une stratégie qui peut contribuer à la mise en œuvre de la Convention relative aux droits des personnes handicapées, de législations nationales qui incluent les personnes handicapées et qui soutiennent le développement inclusif à base communautaire.

Le Guide offre aux directeurs de la RBC, entre autres, des propositions d'ordre pratique sur les moyens de développer ou de renforcer les programmes de RBC et de veiller à ce que les personnes handicapées et leurs familles soient en mesure d'accéder aux prestations des secteurs de la santé, de l'éducation, des moyens de subsistance et des prestations sociales. Le Guide insiste fortement sur l'autonomisation ('empowerment') en facilitant l'intégration et la participation des personnes handicapées, de leurs familles et communautés dans tous les processus de développement et de prise de décision.

L'Organisation mondiale de la santé (OMS), l'Organisation internationale du Travail (OIT), l'Organisation des Nations Unies pour l'éducation, la science et la culture (UNESCO) ainsi que le Consortium international sur le handicap et le développement (IDDC), notamment les membres du Groupe spécial de la RBC - CBM, Handicap International, l'Association italienne Amici di Raoul Follereau (AIFO), Light for the World, l'Association norvégienne pour les personnes handicapées et Sightsavers - ont étroitement collaboré à l'élaboration du présent document. Il ne faut pas omettre de mentionner aussi la participation de plus de 180 individus et d'environ 300 organisations du monde entier et notamment des pays à faible revenu.

 No. de commande 21500792

Ce guide est présenté en sept différents livrets :

Livret 1 L'introduction : elle passe en revue le concept du handicap, la Convention relative aux droits des personnes handicapées, l'évolution de la RBC et la matrice de la RBC. Le Chapitre sur la Gestion offre une vue d'ensemble du cycle de gestion relatif à l'élaboration et au renforcement des programmes de RBC.

Livrets 2 à 6 Chaque livret examine chacune des cinq composantes (santé, éducation, moyens de subsistance, sociale et autonomisation – '*empowerment*') de la matrice de la RBC.

Livret 7 Le livret supplémentaire aborde quatre problèmes spécifiques, à savoir le VIH/SIDA, la santé mentale, la lèpre et les crises humanitaires, qui ont été jusque-là négligés par les programmes de RBC.

Planches pour le diagnostic microscopique du paludisme

Ce jeu de douze planches plastifiées au format A4 est produit pour aider au diagnostic du paludisme humain par l'examen au microscope. Les planches sont conçues dans un double but : apporter une aide pratique aux agents de santé dans leurs activités quotidiennes de diagnostic des infections paludiques et une aide pédagogique aux étudiants et stagiaires. Ce nouveau jeu a été produit en tenant compte des observations et commentaires faits par un grand nombre de professionnels et d'experts qui ont utilisé la deuxième édition des Planches pour le diagnostic du paludisme (OMS, 2000).

On y trouve des photographies au microscope qui montrent les différentes espèces et morphologies du paludisme dans les frottis minces et épais. Elles fournissent des descriptions de *P. falciparum*, *P. vivax*, *P. ovale* et *P. malariae*, ainsi que des instructions détaillées sur la préparation et l'utilisation des solutions tampons et des solutions de coloration.

Les photographies au microscope, toutes réalisées au grossissement x 1000 et avec des colorants de Romanowsky, montrent nombre des variations possibles des parasites du paludisme. On y trouvera également des illustrations et des explications des erreurs courantes dans la préparation des frottis sanguins, de même que des conseils pour la manipulation sans danger des échantillons de sang, afin d'éviter le plus possible toute exposition aux virus de l'hépatite et au VIH/sida.

De nouvelles sections ont été ajoutées sur les anticoagulants et le diagnostic des infections mixtes, ainsi que sur la reconnaissance d'autres parasites courants dans le sang périphérique. Les planches sont produites sous une forme plastifiée et étanche qui les rend solides et faciles à utiliser sur le terrain, comme sur la paillasse du laboratoire.

"...ce jeu de planches sera d'une très grande utilité pour le débutant, mais aussi pour de nombreux professionnels expérimentés voulant comparer certains parasites à la morphologie douteuse avec l'image parfaite du stade de développement d'une espèce donnée de Plasmodium. Ces planches en couleur seront idéales pour enseigner la technique du diagnostic du paludisme au microscope."
– Tropical Doctor (extrait de la précédente édition)

Directives pour le traitement du paludisme Deuxième édition

Les *Directives de l'OMS pour le traitement du paludisme*, publiées pour la première fois en 2007, constituent un ensemble de recommandations fondées sur des données probantes pour la prise en charge des cas ; elles s'adressent principalement aux responsables des politiques nationales en la matière et pourront servir de cadre à l'élaboration de protocoles thérapeutiques nationaux particuliers plus détaillés qui tiennent compte des caractéristiques locales de la résistance aux antipaludéens et de la capacité du système de santé du pays.

Cette deuxième édition est une révision des recommandations précédentes à la lumière des dernières acquisitions. La présentation de la première édition a été conservée dans ses grandes lignes en tenant compte des réactions des lecteurs.

Accroître l'accès aux personnels de santé dans les zones rurales ou reculées grâce à une meilleure fidélisation

Recommandations pour une politique mondiale

Tous les responsables politiques, quel que soit le niveau de développement économique de leur pays, s'efforcent d'instaurer l'équité en santé et de pourvoir aux besoins sanitaires de leur population, notamment ceux des groupes vulnérables et défavorisés. Une pénurie de personnels de santé qualifiés dans les zones rurales ou reculées prive une part importante de la population de l'accès à des services de soins de santé, ralentit les progrès sur la voie de la réalisation des objectifs du Millénaire pour le développement et contrarie les aspirations liées au but de la santé pour tous.

Le présent rapport propose un ensemble de recommandations reposant sur des données factuelles pour accroître le recrutement et la fidélisation de personnels de santé motivés dans les zones rurales et reculées, et fournit des orientations sur les modalités d'application des stratégies de fidélisation dans les pays développés comme dans les pays en développement.

Rapport mondial : Rapport ONUSIDA sur l'épidémie mondiale de SIDA 2010

L'édition 2010 du Rapport de l'ONUSIDA sur l'épidémie mondiale de sida inclut de nouveaux tableaux de bord présentant les points clés de la riposte au sida pays par pays. Cet ouvrage de référence mondiale s'appuie sur les dernières données émanant de 182 pays et fournit des analyses complètes sur l'épidémie de sida et sa riposte. Il inclut pour la première fois des données sur la tendance de l'incidence dans plus de 60 pays.

Ce nouveau Rapport de l'ONUSIDA montre que l'épidémie de sida a été stoppée et que le monde commence à inverser le cours du VIH. Les nouvelles infections ont reculé de près de 20 % ces dix dernières années, le nombre des décès liés au sida a lui aussi baissé de près de 20 % au cours des cinq dernières années et le nombre total des personnes vivant avec le VIH se stabilise.

Réunion d'experts FAO/OMS sur l'application des nanotechnologies dans les secteurs de l'alimentation et de l'agriculture

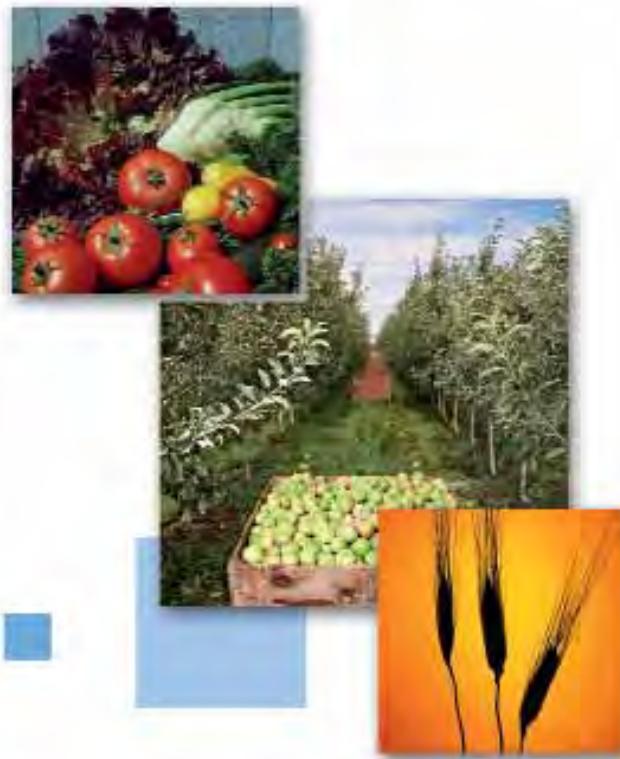

Incidences possibles sur la sécurité alimentaire : rapport de la réunion

De nombreux pays ont pris conscience du potentiel des nanotechnologies dans les secteurs de l'alimentation et de l'agriculture et investissent considérablement dans ses applications dans la production alimentaire. Toutefois, du fait de nos connaissances limitées des effets sur la santé humaine de ces applications, bon nombre de nations estiment qu'il faut examiner sans plus tarder les incidences de ces technologies sur la sécurité sanitaire des aliments.

Pour répondre à ces attentes, la FAO et l'OMS ont pensé qu'il était opportun de convoquer une réunion d'experts sur ce sujet afin de recenser d'autres travaux qui pourraient être nécessaires en vue de l'examen de cette question à l'échelle mondiale.

Guide d'intervention mhGAP pour lutter contre les troubles mentaux, neurologiques et liés à l'utilisation de substances psychoactives dans les structures de soins non spécialisées

Programme d'action Combler les lacunes en santé mentale

Selon une idée fausse et néanmoins très répandue, l'amélioration de la santé mentale nécessiterait des technologies très élaborées et coûteuses et du personnel hautement spécialisé. En réalité,

la plupart des pathologies mentales, neurologiques ou liées à l'utilisation de substances psychoactives responsables d'une morbidité et d'une mortalité importantes peuvent être prises en charge par des prestataires de soins de santé non spécialisés. Ce qu'il convient de faire est donc d'accroître la capacité des systèmes de soins de santé primaires à délivrer des modules de soins intégrés, par le biais de formations, d'un soutien ou d'une supervision.

Ce guide est un outil technique pour la mise en oeuvre du Programme d'action mhGAP. Il a été élaboré à partir d'une revue systématique des éléments d'appréciation, suivie d'une consultation internationale et d'un processus participatif. Il fournit une série complète de recommandations pour faciliter la délivrance de soins de haute qualité dans le cadre des établissements de premier et de deuxième niveau, par des prestataires de soins de santé non spécialisés, dans les pays disposant de peu de ressources. Il présente la prise en charge intégrée des pathologies prioritaires à l'aide de protocoles de prise de décisions cliniques.

Il s'adresse aux prestataires de soins de santé, aux décideurs et aux directeurs de programmes pour répondre aux besoins des personnes atteintes de troubles mentaux, neurologiques et liés à l'utilisation de substances psychoactives.

"Un excellent manuel pratique destiné aux dispensateurs de santé non spécialistes prenant en charge des troubles mentaux, neurologiques et liés à l'utilisation de substances psychoactives aux niveaux primaire et secondaire des soins de santé, dans des systèmes publics ou non."

— Allen Foster », Président, CBM

"Le Guide d'intervention du Programme d'action Combler les lacunes en santé mentale de l'OMS va ouvrir le champ des possibilités de prise en charge des troubles qui sont source de souffrances chez les patients et leurs familles partout dans le monde. Ces algorithmes nuancés reconnaissent qu'il n'existe pas d'interventions applicables à tous ; il faut plutôt que les traitements reposant sur des bases factuelles et administrés par des non-spécialistes puissent et doivent être adaptés aux besoins de chaque patient et aux environnements culturels."

— Thomas Insel, Directeur, National Institute of Mental Health, États-Unis d'Amérique

Surveillance des soins obstétricaux d'urgence

Manuel d'utilisation

Le présent manuel constitue une mise à jour d'un document publié en 1997 par l'UNICEF, l'OMS et UNFPA, qui traite de la surveillance de la disponibilité et de l'utilisation des services obstétricaux. Les indicateurs définis dans ce document ont été utilisés par les ministères de la santé, les agences internationales et les responsables de programmes de plus de 50 pays partout dans le monde.

La présente révision comprend des changements basés sur des activités de suivi et d'évaluation effectuées à l'échelle mondiale, ainsi que sur les nouvelles preuves qui ont émergé au cours des années. Ces changements ont été examinés et approuvés par un groupe international d'experts. Le document révisé comprend deux nouveaux indicateurs et une fonction fondamentale supplémentaire, ainsi que des observations pertinentes et de nouvelles ressources.

Le présent manuel a pour objet de décrire les indicateurs et de fournir des directives aux personnes qui travaillent sur le terrain en ce qui a trait aux études à mener. Il comprend une liste de services salvateurs, ou « fonctions fondamentales », qui servent à définir une structure sanitaire eu égard à sa capacité de traiter les urgences obstétricales.

L'accent est mis sur le fonctionnement actuel plutôt que théorique. Les indicateurs de soins obstétricaux d'urgence décrits dans le présent manuel peuvent servir à mesurer le progrès dans un continuum de programmation : de la disponibilité des soins obstétricaux d'urgence et l'accès à ceux-ci jusqu'à l'utilisation et la qualité des services dispensés.

Conseil pour la prise en charge

de la santé maternelle et néonatale (Le)
Manuel pour le renforcement des compétences

Le but principal de ce manuel est de renforcer les compétences en conseil et en communication des agents de santé, dont les personnes qualifiées, en les aidant à discuter efficacement avec les femmes, leur mari/partenaire, leur famille et leur communauté, des questions importantes entourant la grossesse, l'accouchement, le postpartum, la période postnatale et après un avortement. Les informations principales comprises dans le manuel de prise en charge clinique intitulé *Soins liés à la grossesse, à l'accouchement et à la période néonatale*. Guide de pratiques essentielles y ont été intégrées.

Le manuel se fonde sur une approche d'apprentissage autogéré du conseil. Bien qu'il soit conçu pour être utilisé par un groupe d'agents de santé avec l'aide d'un animateur, il peut également être utilisé par un utilisateur individuel. Toutes les sessions thématiques contiennent des buts et des objectifs spécifiques, qui décrivent clairement les compétences qui seront développées et les apprentissages correspondants qui en résultent.

Des activités pratiques ont été conçues pour encourager la réflexion, provoquer des discussions, établir des compétences et assurer la pertinence locale de l'information. A la fin de chaque session se trouve un récapitulatif pour s'assurer que l'étudiant a compris les points clés avant de passer aux sessions suivantes.

Bibliothèques bleues

"L'établissement d'un réseau de diffusion de l'information médicale et sanitaire au delà des circuits universitaires et académiques a été rendu possible par le projet "Bibliothèques bleues". La cible des bibliothèques bleues, ce sont les centres de santé du district. Les livres sélectionnés ont été choisis pour cette cible."

La Bibliothèque bleue est une collection qui a été mise au point par la bibliothèque de l'Organisation mondiale de la Santé pour être installée dans les centres de santé de district en Afrique afin de pallier le manque d'information médicale et sanitaire actualisée.

Cette collection qui est pré-classée par grandes rubriques, contient une centaine de livres portant sur la médecine et la santé publique.

Pour faciliter son transport et sa conservation, la collection d'ouvrages a été emballée dans une malle en tôle bleue qui a été équipée de deux étagères sur lesquelles sont classées les boîtes à brochures numérotées contenant les livres.

Parmi les ouvrages sélectionnés, priorité a été donnée aux manuels pratiques, (en particulier ceux publiés par l'OMS), dans lesquels on trouve facilement la réponse aux problèmes de santé et de gestion sanitaire auxquels le personnel médical peut être confronté. Il a également été tenu compte des différents niveaux de formation parmi le personnel médical du district, c'est pourquoi le même sujet peut être traité dans plusieurs ouvrages mais sous un angle à chaque fois différent : celui du médecin, de l'infirmier(e), de l'aide-soignant(e) ou de l'auxiliaire de santé.

"... les bibliothèques bleues ont un avenir prometteur en Afrique..."

— Dr Jacques Courtejoie, Directeur du Bureau d'Etudes et de Recherches pour la promotion de la santé, République démocratique du Congo

"... une source d'information fiable, facile à utiliser..."

— Steve Baxendale, Pacific Open Learning HealthNet, Fidji

Estrategia mundial para reducir el uso nocivo del alcohol

Se calcula que el uso nocivo del alcohol causa cada año 2,5 millones de muertes, y una proporción considerable de ellas corresponde a personas jóvenes. El consumo de bebidas alcohólicas ocupa el tercer lugar entre los principales factores de riesgo de mala salud en el mundo. El uso nocivo del alcohol es uno de los cuatro factores de riesgo de enfermedades no transmisibles importantes que son susceptibles de modificación y prevención.

La estrategia mundial para reducir el uso nocivo del alcohol, avalada por la 63.a Asamblea Mundial de la Salud en mayo de 2010, reconoce los vínculos estrechos que existen entre dicho uso y el desarrollo socioeconómico. Asimismo, aprovecha varias iniciativas estratégicas mundiales y regionales para la prevención y el control de enfermedades no transmisibles, en particular el plan de acción de la estrategia mundial para la prevención y el control de las enfermedades no transmisibles. La estrategia mundial también establece áreas prioritarias para la actuación mundial dirigida a promover, apoyar y complementar las medidas pertinentes en los niveles local, nacional y regional.

Aumentar el acceso al personal sanitario en zonas remotas o rurales mejorando la retención

Recomendaciones mundiales de política

Para lograr servicios de salud eficaces y mejorar los resultados sanitarios, es indispensable que haya un número suficiente de agentes de salud motivados y competentes en el lugar y el momento apropiados. La escasez de personal sanitario calificado en las zonas remotas o rurales impide que un porcentaje considerable de la población acceda a los servicios de salud, entorpece el progreso hacia la consecución de los Objetivos de Desarrollo del Milenio y constituye un escollo en la estrategia destinada a lograr salud para todos.

La OMS ha elaborado estas recomendaciones en respuesta a las peticiones de los líderes mundiales, la sociedad civil y los Estados Miembros.

Las recomendaciones fundamentadas en datos probatorios se refieren a los desplazamientos del personal sanitario dentro de las fronteras de un país y giran exclusivamente en torno a las estrategias destinadas a aumentar la dotación de personal sanitario en zonas remotas o rurales mejorando las medidas para atraer, contratar y retener a los agentes salud. Las recomendaciones son aplicables a todas las categorías de agentes del sector sanitario formal y regulado, incluidos los administradores y el personal de apoyo, y también a los estudiantes que asisten o desean asistir a programas de formación en disciplinas relacionadas con la salud.

Guía de intervención mhGAP para los trastornos mentales, neurológicos y por uso de sustancias en el nivel de atención de la salud no especializada

Programa de acción mundial para superar las brechas en salud mental

La Guía de Intervención incluye recomendaciones sobre las intervenciones basadas en datos probatorios para identificar y manejar una serie de condiciones prioritarias. Estas condiciones prioritarias incluyen: depresión, psicosis, trastorno bipolar, epilepsia, trastornos del desarrollo y conductuales en niños y adolescentes, demencia, trastornos por uso de alcohol, trastornos por uso de drogas, lesiones autoinfligidas/suicidio y otros síntomas emocionales significativos o no justificados médicaamente.

La Guía de Intervención es breve para facilitar las intervenciones por parte de los profesionales no especializados, sobrecargados laboralmente, en los países de ingresos bajos y medio-bajos. La Guía incluye un "esquema principal" que proporciona información sobre las formas más comunes de presentación de las condiciones prioritarias con el fin de guiar al clínico a los módulos pertinentes. Los módulos suministran información sobre como evaluar y manejar las condiciones prioritarias con un formato simple de árbol de decisiones.

La Guía de Intervención es una herramienta técnica creada por la OMS para ayudar a la implementación en los países del Programa de Acción Mundial para superar las brechas en salud mental (mhGAP).

"Un excelente manual práctico para los profesionales de salud no especializados que manejan los trastornos mentales, neurológicos y de abuso de sustancias en los niveles de la atención de salud primario y secundario, tanto en el sistema gubernamental como no gubernamental".

— Allen Foster, President, CBM

"Una herramienta integral y muy útil, que contribuirá significativamente a la integración de la salud mental en la atención primaria en varios países de ingresos bajos y medianos".

— Mario Maj, President, World Psychiatric Association

"La guía de intervención de la OMS, basada de forma amplia en datos probatorios, nos ayudará a extender la atención a todas las personas con enfermedades mentales a través del Programa de Salud Mental Nacional y de distrito en el país".

— K. Sujatha Rao, Secretary, Health & Family Welfare, Government of India

Reunión conjunta FAO/OMS de expertos acerca de la aplicación de la nanotecnología en los sectores alimentario y agropecuario

Posibles consecuencias para la inocuidad de los alimentos: informe de la reunión

Muchos países han determinado el potencial de la nanotecnología en los sectores agropecuario y alimentario y están invirtiendo de manera considerable en sus aplicaciones a la producción de alimentos. Sin embargo, debido a los pocos conocimientos que existen sobre los efectos en la salud humana de tales aplicaciones, muchos países reconocen la necesidad de examinar previamente las consecuencias para la inocuidad de los alimentos de la tecnología.

En respuesta a tales peticiones, la FAO y la OMS consideran que era oportuno convocar una reunión de expertos sobre el tema con el fin de definir el trabajo futuro para abordar la cuestión a nivel mundial.

Recomendaciones para la estimación de las necesidades de sangre y sus componentes

Esta publicación pretende apoyar la planificación de actividades por parte de los programas y los bancos de sangre que abastecen a los hospitales de la Región de las Américas. Su contenido parte de la premisa de que para cumplir de manera más eficiente y efectiva sus funciones, los centros proveedores deben proyectar las necesidades futuras de componentes sanguíneos a nivel hospitalario y así programas de manera más puntual el logro de sus metas.

Informe mundial: Informe del ONUSIDA sobre la epidemia mundial de SIDA 2010

La edición de 2010 del Informe del ONUSIDA sobre la epidemia mundial de sida incluye nuevas fichas de puntuación por países sobre cuestiones clave relacionadas con la respuesta al sida. Este documento de referencia mundial, basado en los últimos datos recopilados en 182 países, ofrece un análisis integral de la epidemia y la respuesta. El informe incluye, por primera vez, datos sobre las tendencias de la incidencia en más de 60 países.

El nuevo informe del ONUSIDA muestra que se ha conseguido detener la epidemia de sida y que el mundo está comenzando a reducir la propagación del VIH. Las nuevas infecciones han descendido prácticamente un 20% en los últimos 10 años, las muertes relacionadas con el sida también se han reducido casi un 20% en el último lustro, y el número total de personas que viven con el VIH se está estabilizando.
